N°90 — September 2026

2nd quarter 2026

Aggregated data since 1st January

Quarterly Economic Report

Change in comparison to Q2 2025

Foreign trade		Economy		Private-sector employment		Tourism	
Exports	↘	Revenue	↘	N° of employers	→	Occupancy rate	↘
Imports	↘	Entities created	↘	N° of jobs	↗	Occupied rooms	→
Balance of trade	↗	Entities struck-off	↘	Hours worked	↗	N° of cruise passengers	↘

Note: variations between -1% and +1% are considered stable.

In line with the first quarter, the key indicators of the Monegasque economy remained at high levels at the end of June 2026, although some showed a decline compared with 2025.

The changes in revenue and the real estate market particularly illustrate this trend. Both have contracted compared with the same period the previous year, which had benefited from significant one-off transactions. However, they have maintained positive results given their long-term trends.

The overall volume of trade declined at the end of the second quarter, but at a much more moderate rate than in the first quarter.

Private-sector employment, meanwhile, continued to expand in the second quarter, reaching a record high. All MESs showed growth, with the exception of the industrial sector, where the decline was due to an internal shift of employees to another business sector.

Arrivals and guest nights increased, but the expansion of the supply of available rooms led to a fall in the occupancy rate.

FOREIGN TRADE EXCLUDING FRANCE

Monaco's overall volume of trade (excluding France) stood at €1.8 billion at the end of the second quarter of 2026, returning to a level close to that of 2023. It fell by 6.1%, or nearly €120 million, compared with the previous year, a decline significantly less severe than that recorded at the end of March.

Exports and imports have fallen, both with the European Union (EU) and with the rest of the world. However, the decline in purchases (-€103.8 million, or -7.6%) was greater than that in sales (-€16.1 million, or -2.7%). The trade deficit has therefore narrowed by 11.4% to fall below €700 million. At the same time, the coverage ratio (exports/imports) has risen by 2.3 percentage points to reach 46.0%.

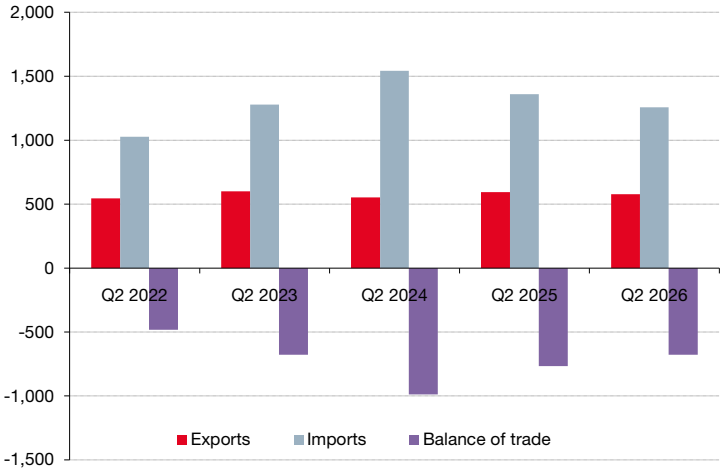

In value terms, whilst two-thirds of sales were to EU member states, imports came mainly from non-EU countries. Overall, the value of trade with the EU (50.1% of total trade) and the rest of the world (49.9%) was broadly similar.

Driven by imports of Electronic components and circuit boards worth nearly €190 million, Taiwan is now the Principality's second-largest supplier after Italy. On the export side, sales to Italy fell (-23.2%) in favour, in particular, of those to Germany and Spain (+12.3% and +17.4% respectively).

In addition to Electronic components and circuit boards, trade in horological goods rose sharply, by €54.4 million, or 43.5%, compared with the first half of 2025.

Unit: million euros

Sources: French Directorate-General of Customs and Indirect Taxes, Monaco Statistics

The foreign trade figures are provided to Monaco Statistics by the French Directorate-General of Customs and Indirect Taxes. These figures are provisional. They are updated (enhanced) on a monthly basis. Variations may be noted each quarter as a result of the late arrival of some statements; many enhancements are still expected. The data and comments should therefore be treated with caution. (Trade with France is not included. Cumulative data as at 30/06/2026).

The new classification of economic activities "NAF 2025" has been in application in the Principality since 1 January 2026. In this context, the groupings and labels of the major economic sectors (MESs) have been redefined. Consequently, the sectoral results have been recalculated and are not comparable with figures published in previous years.

REVENUE[1]

In the first half of 2026, Monegasque revenue reached €9.2 billion, excluding Financial and insurance activities. The total thus fell by nearly 10% (or approximately €1 billion), a decline half as steep as that seen in the first quarter. This trend is attributable to the completion of major construction projects in the previous year, as well as the absence of one-off transactions similar to those observed at the start of 2025. However, eight out of thirteen[2] major economic sectors (MESs) recorded an increase in turnover.

Retail trade experienced significant growth over the period, rising by €125.1 million, or 11.1%. This was driven in particular by the three product categories generating the highest revenue in this sector, namely motor vehicles (+€57.0 million), watches and jewellery (+€21.1 million) and clothing (+€23.5 million).

Accommodation and food service activities exceeded €600 million in revenue after an increase of €74.0 million (+13.9%), an unprecedented figure for this time of year.

Wholesale trade grew by more than €60 million (+2.3%) thanks in particular to both trade in fuels and related products (+€48.9 million) and Activities of agents involved in the wholesale of food, beverages and tobacco (+€31.9 million).

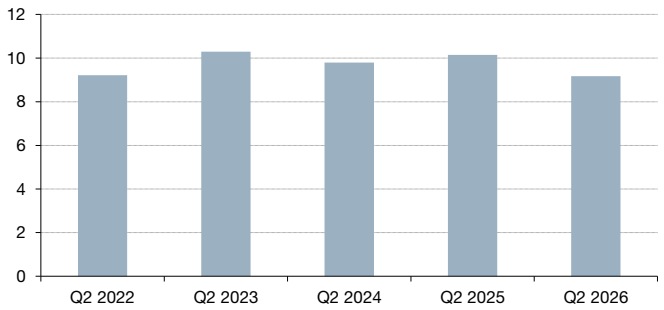

Driven by the substantial and unusual revenues of two entities, Professional, scientific and technical activities had seen a sharp rise in 2025. The absence of these exceptional transactions at the end of June 2026 led to an expected decline in the sector's results, down by more than half (-€894.4 million, or -50.8%).

Revenue in the Construction sector fell by €190.6 million, affected by the decline in structural work.

Despite growth in the Buying and selling of own real estate (+€43.1 million), the anticipated decline of a company operating in Development of building projects has led to a fall in Real estate activities overall (-€156.8 million, or -25.8%).

The other two MESs that saw a decline this half-year were Industrial, productive and craft activities (-€33.7 million, or -7.6%) and Arts, sports and recreation (-€6.3 million, or -1.2%).

Monthly change in number of hours worked

Unit: million hours

Sources: Caisses Sociales de Monaco, Monaco Statistics

In June 2026, the month of the Formula 1 Grand Prix (previously held in May), the number of jobs in the private sector approached 70,000 for the first time in a second quarter, surpassing the previous record set in 2025. There were 2,795 more jobs than in the previous year, representing an increase of 4.2%.

The number of jobs rose across all sectors, except for Industrial, productive and craft activities (where the fall in staff numbers resulted from the transfer of assets from a support establishment for hydrocarbon extraction to its parent company operating in Professional, scientific and technical activities).

Administrative and support service activities recorded the strongest growth (+9.4%, or 1,177 more jobs than in 2025), half of which was driven by Temporary employment agency activities (+5.8%, or 507 more jobs). Meanwhile, the workforce in Construction, excluding temporary work, remained completely stable.

With nearly 800 additional jobs compared with 2025 (+7.2%, the second-highest increase of the quarter), employment in Accommodation and food service activities exceeded the 11,000-job mark for the first time in June 2026.

Professional, scientific and technical activities had 272 more jobs than a year earlier, representing a 6.0% increase over the period.

The number of hours worked during the first half of the year remained higher each month than the previous year's level, including in May, despite the change of schedule for the Grand Prix. Over the first six months of the year, the private sector thus totalled 53.5 million hours worked cumulatively, one million more than in the first half of 2025 (+1.8%). Professional, scientific and technical activities and Other service activities recorded increases in hours worked of 5.7% and 5.2% respectively. In Accommodation and food service activities, over 400,000 more hours were worked compared with 2025 (the largest increase in absolute terms), representing a year-on-year rise of 5.0%. This indicator showed a slight decline in temporary work (-1.7%) and, once again, remained stable in Construction (-0.3%).

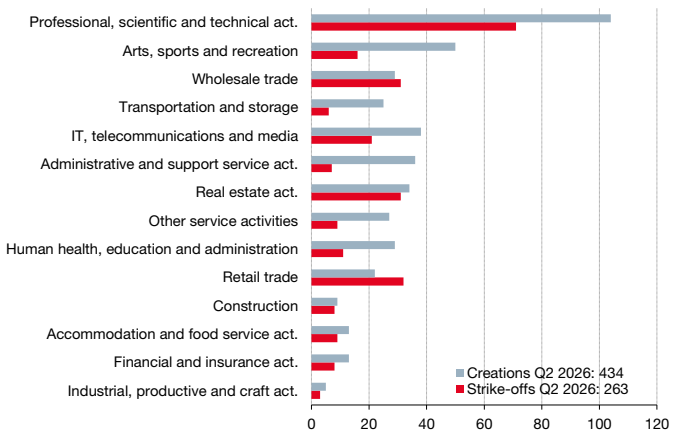

The number of private-sector employers stood at 6,444 at the end of the first half of 2026, an increase of 48 entities compared with the previous year (+0.8%).

BUSINESSES

The net balance of establishments in the second quarter of 2026 stood at +171, compared with +280 a year earlier. This decline is due to a fall in new business registrations (-24.8%, or 434 compared with 577 in 2025), mitigated by a decrease in deregistrations (-11.4%, or 263 compared with 297). The number of entities strictly covered by the Trade and Industry Register (RCI) is growing at a more moderate rate than the overall figure, with 300 creations and 227 strike-offs, giving a net balance of +73 compared with +54 last year.

The Arts, sport and recreation sector recorded the highest net balance (+34), closely followed by Professional, scientific and technical activities (+33). Retail trade recorded the lowest net balance (-10), with 32 deregistrations and 22 creations over the period.

Note: The establishment data presented cover all legal forms recorded in the NIS Register, including those in the RCI, with the exception of non-trading companies.

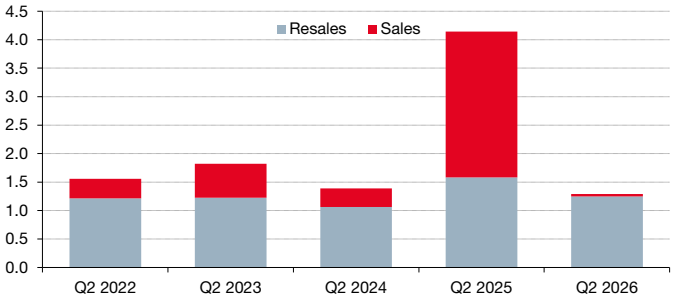

REAL ESTATE

Change in the number of real estate transactions

	Q2 2025	Q2 2026	Var 25/26
Apartment sales (new)	57	4	-93.0%
Apartment resales	238	238	0.0%

Sources: Department of Tax Services, Monaco Statistics

Change in the amount of real estate transactions

Unit: billion euros

Sources: Department of Tax Services, Monaco Statistics

The new-build property market recorded only 4 sales totalling €42.7 million over the first half of 2026, against a backdrop of limited availability of new-build or off-plan properties for sale. This represents a sharp decline compared with the exceptional level seen in the first semester of 2025, which had been driven by the completion of several major projects.

With 238 transactions, the number of resales was identical to that recorded in the same period in 2025, the highest level of the decade. Although down by €300 million (-21.2%) compared with the first half of 2025, the value of resales stood at €1.2 billion, the second-highest level since data collection began in 2006.

TOURISM

In the first half of 2026, hotel occupancy showed a positive trend, with nearly 170,000 arrivals, up 4.2% on 2025. The number of overnight stays reached 423,261 (+2.6%), whilst the average length of stay remained stable at 2.5 nights.

Arrivals from countries outside the European Union accounted for 43.1% of the total, down by 2.4 percentage points.

At the same time, the number of occupied rooms remained virtually unchanged (-0.1%), whilst available supply increased by 2.1%. The hotel occupancy rate thus stood at 62.3%, down 1.4 percentage points year-on-year.

Despite an increase in the number of cruise ships calling at the Principality (+9, or +15.5%), the number of cruise passengers fell (-3,473, or -10.5%).

Change in hotel industry indicators

Sources: Driver and Vehicle Licensing Office, Public Car Parks Office, Monaco Statistics

[1] Private cars only

[2] According to the Code de l'environnement, an "ecological vehicle" is an electric or petrol-electric hybrid vehicle emitting less than 98g of CO_2 per kilometre.

Between January and June 2026, air traffic saw a sharp increase, with 13,579 movements (+14.9% compared with the same period in 2025) and 32,505 passengers (+25.7%). Commercial flights accounted for the majority of traffic (70.9%) and passengers (58.5%). Over the first six months of the year, June now accounts for the highest number of movements (5,004, or 36.9% of traffic) and passengers (10,777, or 33.2%), largely due to the change in the Grand Prix schedule.

New vehicle registrations[1] totalled 1,307 at the end of the first half of the year, down compared with 2025 (-8.7%). Non-rechargeable petrol-electric hybrid vehicles were the most common type of engine, accounting for 25.6% (up 3.9 percentage points), ahead of petrol at 22.0% (-0.5 percentage points) and plug-in hybrids at 21.6% (-0.1 percentage points). The share of electric vehicles fell by 3.4 percentage points to 20.7%. In total, ecological vehicles[2] accounted for 38.7% of new registrations (-6.1 percentage points).

Second-hand vehicles registrations remained stable, totalling 2,143 units.

In the first half of 2026, public car parks recorded nearly 8.5 million visits, an increase of 66,375 (+0.8%).
