INTRODUCTION 3

1. OVERVIEW OF EMPLOYMENT IN MONACO 4

1.1. Just under 78,000 jobs recorded in the Principality in 2025 4

1.2. A labour market predominantly focused on tertiary activities 5

1.3. Over nine jobs out of ten are in the private sector 6

2. PRIVATE-SECTOR EMPLOYEES 7

2.1. Nearly 60,000 people are employed in the private sector 7

2.2. The number of hours worked is down but remains high 8

2.3. The proportion of women among private-sector employees is on the rise 9

2.4. A growingly ageing workforce 11

2.5. Six out of ten employees live in the Alpes-Maritimes, outside the neighbouring municipalities 12

2.6. 145 nationalities represented among private-sector employees 14

2.7. A number of Monegasques employed in the private sector that remains constant 15

2.8. Temporary work activities, although down, are still at a high level 16

2.9. Nearly 2,900 employees, mostly women, are employed by households 18

2.10. More than 7,300 remote workers by the end of 2025 in the private sector 19

3. PRIVATE-SECTOR EMPLOYERS 20

3.1. The number of private-sector employers is trending upwards 20

3.2. Private-sector employers number just under 10 employees on average 21

3.3. 536 additional employers in ten years 22

4. CIVIL SERVICE WORKFORCE 23

4.1. Almost 5,400 people work in the Civil service at the end of 2025 23

4.2. 537 new civil servants recruited in 2025 and 382 departures 24

4.3. The Civil service workforce has increased by 19.1% in ten years 25

4.4. Nearly a quarter of Monegasque nationals in the Civil service 26

4.5. A slight decline in the average age 27

4.6. The number of commuters employed in the Civil service continues to grow 28

5. SELF-EMPLOYED WORKERS 30

5.1. Over 6,500 self-employed activities by the end of 2025 30

5.2. A steadily growing number of self-employed activities 31

5.3. A majority of self-employed workers are male and in their fifties 32

5.4. Almost 900 Monegasque self-employed workers in 2025 33

Additional notes 35

Introduction

The major construction projects that have shaped recent economic activity in the Principality have contributed to historical results in the private labour market in 2024. The gradual completion of these projects is naturally leading to a slowdown in certain indicators in specific sectors, especially temporary work and the construction industry.

It is within this particular economic context that this Observatory is set. However, the 2025 Monegasque labour market is maintaining a level of activity that ranks among the highest ever recorded.

Note: the new classification of economic activities "NAF 2025" has been applied in the Principality since 1 January 2026. In this context, the groupings and labels of the major economic sectors (MESs) have been redefined. Consequently, the sectoral results have been recalculated and are not comparable with those in previous publications.

The Monegasque labour market is characterised by several specific features, particularly in comparison with its French and Italian neighbours, reflecting the unique geographical and economic context of the Principality. The number of workers is nearly twice that of the resident population. The salaried workforce, which is predominantly employed in the private sector (over 90%), typically works in small enterprises, and largely resides outside Monaco. Monegasque nationals represent a minority. Certain business sectors are almost non-existent, while some categories of workers – such as temporary staff or domestic employees – occupy a significant place.

In this context, an in-depth analysis of the structural specificities of Monaco's labour market is essential. It is with this objective in mind that the Employment Observatory of the Principality of Monaco was established. Its aim is to provide a clear, objective, and well-documented overview of employment dynamics, based on reliable data (provided by the Caisses Sociales de Monaco for private sector employment and by the Human Resources and Training Department for the public sector) and in-depth analysis.

1. Overview of employment in Monaco

1.1. Just under 78,000 jobs recorded in the Principality in 2025

At the end of 2025, there are 77,866 jobs recorded in the Principality, a slight decrease compared to the previous year.

Table 1. Employment by status at the end of 2025 and change

	Number	Share	Variation 2024/25
Salaried employment	70,163	90.1%	-1.0%
incl. private sector	*64,770*	*83.2%*	*-1.3%*
incl. Civil service	*5,393*	*6.9%*	*3.0%*
Self-employment	7,703	9.9%	2.2%
Total	**77,866**	**100%**	**-0.7%**

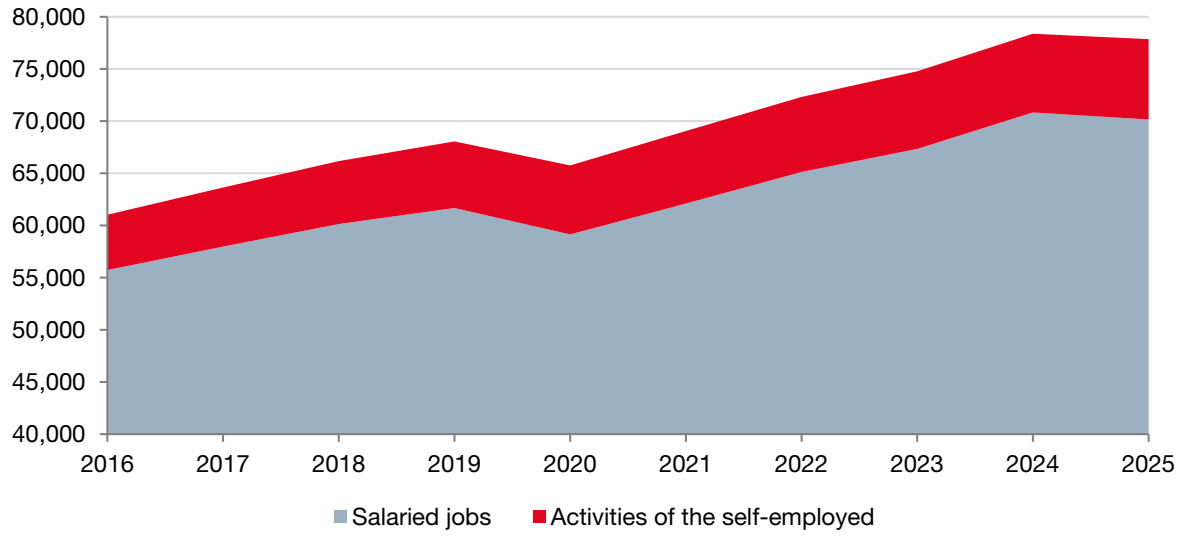

Sources: Caisses sociales de Monaco, Human Resources and Training Department, Monaco Statistics

More than 70,000 jobs, i.e. nine out of ten, are salaried positions (90.1%). Nearly 65,000 are in the private sector (83.2%), with the remainder in the Civil service (5,393 jobs, or 6.9%). Moreover, 7,703 self-employed jobs are recorded (9.9%).

The Monegasque labour market experienced an overall slowdown of 0.7% between 2024 and 2025, i.e. 510 fewer positions compared to the previous year, as a result of the decrease in private-sector employment over the period (-1.3% or -829 jobs). The respective growth of self-employment (+2.2%) and Civil service (+3.0%) did not offset this decline.

However, the level of employment remains very high: it grew by 27.6% over the past ten years, corresponding to almost 17,000 additional jobs since 2016, all sectors combined.

Figure 1. Ten-year change in employment by status

Sources: Caisses sociales de Monaco, Human Resources and Training Department, Monaco Statistics

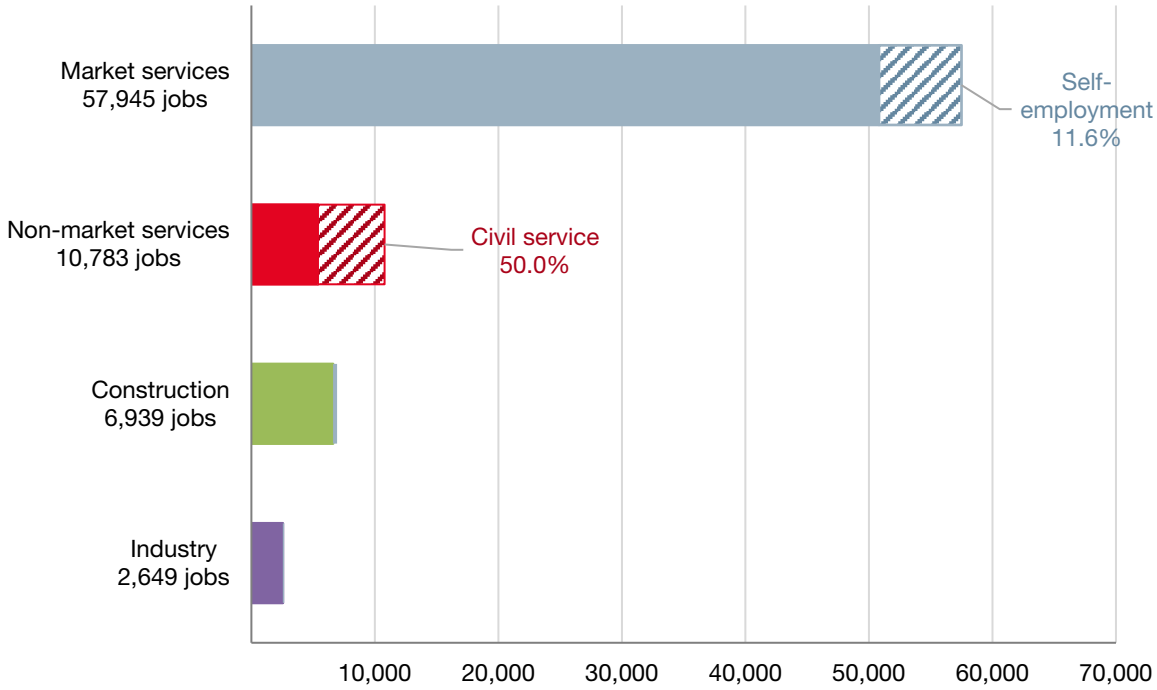

Salaried employment has increased by 25.9% over the decade, i.e. 14,435 more jobs (average annual growth of 2.6% over the period). The growth in self-employed activities has been even more dynamic: 2,394 additional self-employed jobs were recorded since 2016, an increase of 45.1% (+4.2% each year on average).

In the private sector, the number of **jobs** and the number of **employees** are two distinct units used for analysing the workforce. Indeed, an individual working in the private sector may hold more than one job (which is particularly common in certain population groups, notably domestic staff and temporary workers). In the Civil service, it is assumed that one job corresponds to one employee. Regarding self-employment, all activities carried out by self-employed workers are considered. As such, a self-employed job corresponds to a unique pairing between a self-employed worker and an activity.

1.2. A labour market predominantly focused on tertiary activities

In Monaco, the vast majority of economic activity belongs to the tertiary sector[1], which has an impact on the structure of the labour market. In 2025, almost 88 % of overall employment is therefore linked to tertiary activities.

Figure 2. Breakdown of overall employment by sector of activity in 2025

Reading: in 2025, the market services sector has 57,495 jobs; among these, 11.6% are self-employed jobs.
Sources: Caisses sociales de Monaco, Human Resources and Training Department, Monaco Statistics

With more than 57,000 jobs, the market services sector (which comprises trade, transport, financial operations, business services, personal services, accommodation and food service activities, real estate, information-communication) accounts for nearly three-quarters of the jobs recorded at the end of the year 2025. The proportion of self-employment stands at 11.6%. This is the highest relative share recorded, with self-employment being marginal in Industry and Construction sectors (less than 1%).

The non-market services sector (including the Monegasque Civil service), in second place, accounts for 13.8% of jobs, i.e. over 10,000. Then come the Construction and Industry sectors, which represent 8.9% and 3.4% respectively.

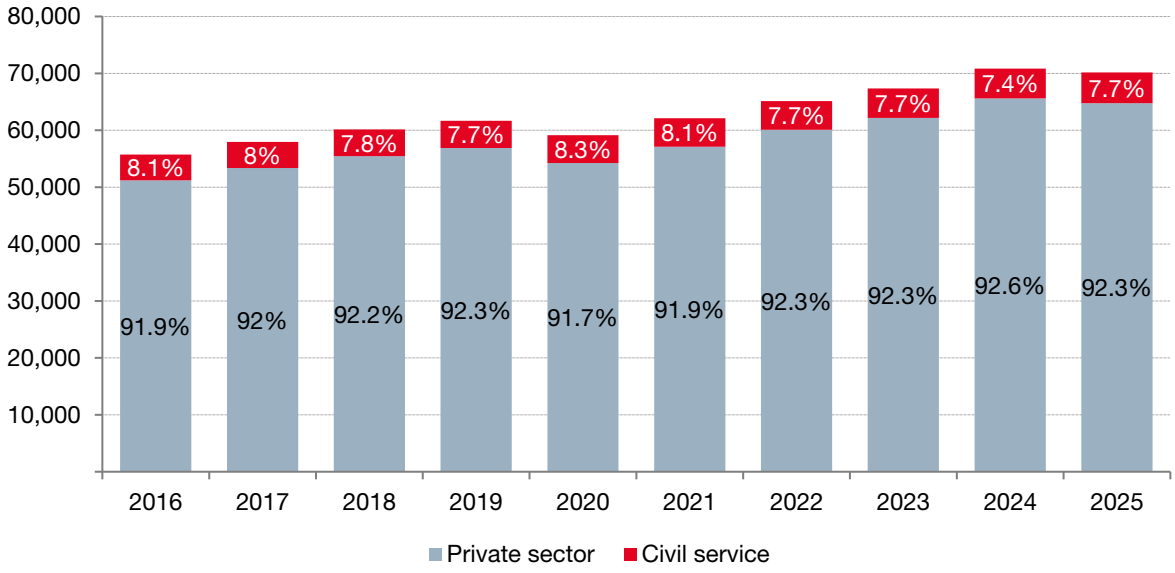

Industry and **Construction** include the number of salaried and self-employed jobs recorded in the private sector belonging to the major economic sectors (MES) *Industrial, productive and craft activities* and *Construction* of the new NAF 2025.
Non-market services include employment in the Civil service as well as the number of salaried and self-employed jobs in the private sector belonging to the MES *Human health, education and administration*.
Finally, **Market services** include all private salaried employment and self-employment counted for the MES not mentioned above.

[1] The tertiary sector covers a wide range of activities from commerce to administration, transport, financial and real estate activities, business and personal services, education, health and social work. The perimeter of the tertiary sector is therefore defined by complementarity with agricultural and industrial activities (the primary and secondary sectors) – *source: Insee*

1.3. Over nine jobs out of ten are in the private sector

The private sector accounts for more than 92% of salaried employment in 2025.

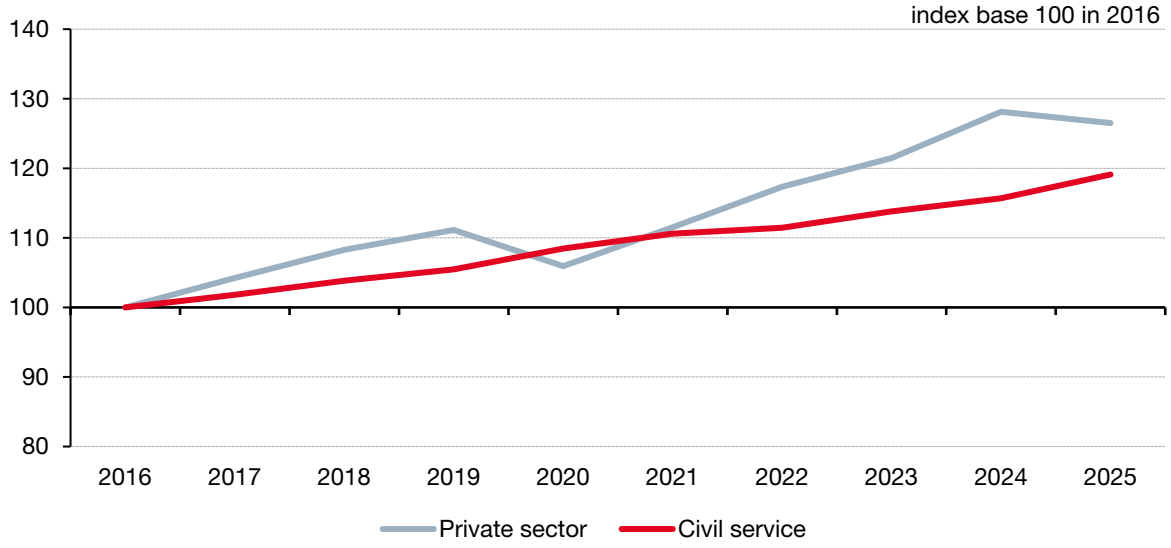

Figure 3. Ten-year change of salaried employment by sector

Sources: Caisses sociales de Monaco, Human Resources and Training Department, Monaco Statistics

Over the past ten years, the distribution between public and private sector has changed only marginally. The Civil service accounts for 7.7% of salaried employment at the end of 2025 (i.e. 0.3 percentage-point rise compared to 2024), against 92.3% for the private sector. By comparison, the public sector accounts for 22.4% of salaried employment in France in the fourth quarter of 2025[2].

Figure 4. Ten-year change of salaried employment by sector

Reading: Private-sector employment increased by 26.5% between 2016 and 2025 (index 126.5 in 2025). Over the same period, the number of jobs in the Civil service increased by 19.1% (index 119.1).
Sources: Caisses sociales de Monaco, Human Resources and Training Department, Monaco Statistics

In 2025, the Civil service workforce is 19.1% higher than in 2016. Its growth has been linear over the past decade (+2.0% per year on average). Meanwhile, private-sector employment increased by 26.5% over the period. Although the ten-year trend remains upward, 2025 marks the first year in which a decline in private-sector employment has been observed since the health crisis linked to the Covid-19 pandemic.

[2] Source: https://www.insee.fr/en/statistiques/8885993

2. Private-sector employees

2.1. Nearly 60,000 people are employed in the private sector

While 2024 was characterised by particularly dynamic economic activity, the completion of major construction projects impacted the labour market, especially due to the expected fall in the temporary workforce. Therefore, with 59,724 employees recorded in December 2025, the total number of workers in the private sector has fallen by 1.2%, i.e. 730 fewer employees in one year. However, the overall workforce in 2025 represents the second-highest level on record.

Table 2. Number of private-sector employees by MES in 2025

	Number	Share	Variation 2024/25
Administrative and support service activities	9,627	16.1%	-12.4%
incl. Temporary work agency activities	*6,458*	*10.8%*	*-17.3%*
Accommodation and food service activities	8,988	15.0%	3.1%
Construction	6,245	10.5%	-4.4%
Human health, education and administration	4,683	7.8%	2.8%
Professional, scientific and technical activities	4,652	7.8%	5.5%
Financial and insurance activities	4,621	7.7%	1.6%
Other service activities	4,284	7.2%	2.6%
incl. Activities of households as employers of domestic personnel	*2,848*	*4.8%*	*3.4%*
Retail trade	3,070	5.1%	0.2%
Wholesale trade	2,792	4.7%	1.4%
Arts, sports and recreation	2,583	4.3%	6.7%
Industrial, productive and craft activities	2,513	4.2%	-7.7%
Transportation and storage	2,070	3.5%	1.7%
Real estate activities	1,904	3.2%	2.5%
IT, telecommunications and media	1,694	2.8%	0.9%
Total	**59,724**	**100%**	**-1.2%**

Note: New MESs since the entry into force of the NAF 2025 on 1 January 2026
Sources: Caisses sociales de Monaco, Monaco Statistics

Among the fourteen major economic sectors (MES) constituting the Monegasque economy[3], Administrative and support service activities – which comprise temporary work – take the lead in terms of workforce in 2025 (9,627 employees, i.e. 16.1%). With almost 9,000 workers, Accommodation and food service activities are following closely and account for 15% of the private-sector employment[4]. Construction rounds out the top three sectors, which each account for more than 10% of the workforce, with more than 6,000 salaried people.

Between 2024 and 2025, only three MESs saw their numbers decline. With 1,360 fewer employees than in 2024, i.e. -12.4%, Administrative and support service activities experience the sharpest decline, affected by the end of major construction projects and the slowdown in temporary work (which relies mainly on assignments in construction industry). Construction sector (excluding temporary workers) shows a simultaneous decrease of 4.4%, corresponding to 288 fewer employees in one year. Industrial, productive and craft activities are down by 7.7%, due to the closure of a company classified under this MES, and whose staff have been transferred to the main entity under Professional, scientific and technical activities. This operation also contributes to the 5.5% increase in the latter sector between 2024 and 2025 (+241 people). Accommodation and food service activities, as well as Arts, sports and recreation, also show a significant increase in their workforce.

[3] Up from twelve previously, following the entry into force of the new NAF 2025 in the Principality.

[4] A major player in the Monegasque economy groups all its employees (gaming, hotels, restaurants) in the MES Accommodation and food service activities.

2.2. The number of hours worked is down but remains high

Private-sector employees worked a total of 105.7 million cumulative hours over the twelve months of 2025, a decrease of 2 million compared to 2024 (-1.9%).

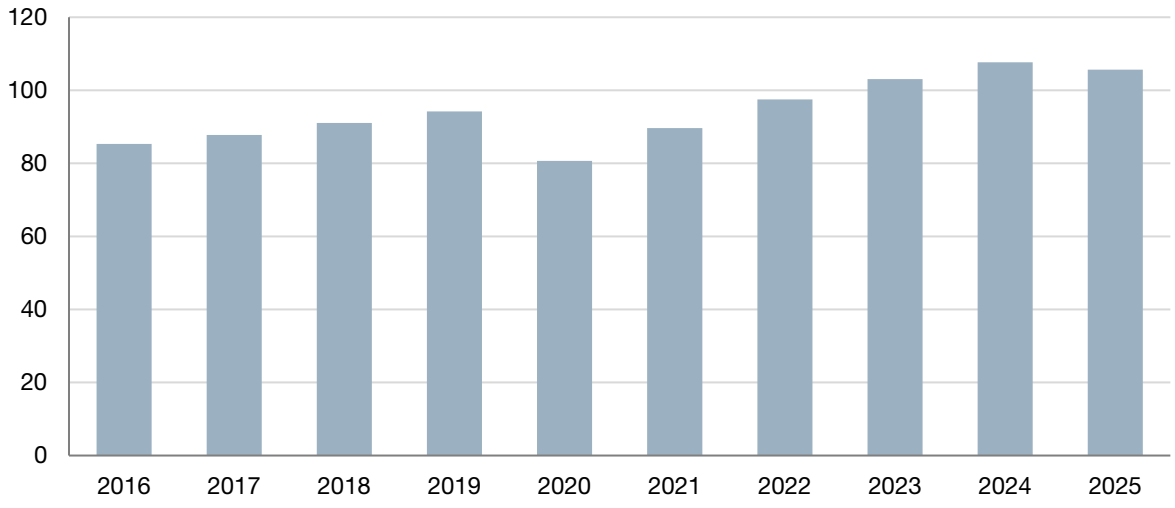

Table 3. Cumulative number of hours worked in the private sector by MES in 2025

	Number	Share	Variation 2024/25
Accommodation and food service activities	16.7	15.8%	4.3%
Administrative and support service activities	14.2	13.5%	-16.3%
incl. Temporary work agency activities	*8.7*	*8.3%*	*-23.8%*
Construction	12.0	11.4%	-6.9%
Financial and insurance activities	8.8	8.3%	2.2%
Professional, scientific and technical activities	8.4	8.0%	0.0%

Arts, sports and recreation	3.6	3.4%	3.2%
IT, telecommunications and media	3.2	3.1%	0.9%
TOTAL	**105.7**	**100%**	**-1.9%**

Note: New MESs since the entry into force of the NAF 2025 on 1 January 2026
Unit: million hours
Sources: Caisses sociales de Monaco, Monaco Statistics

Accommodation and food service activities, the second-largest employer in the Principality, is the MES that has generated the greatest number of hours worked over 2025, with 16.7 million (15.8% of the total). This number has risen by 4.3% compared to 2024, i.e. nearly 700,000 more hours in one year. Among the other increases observed, the number of hours worked rose in the Real estate activities (+5.1%) as well as in domestic employment (+4.4%). In line with the reduction in its workforce, temporary work experienced the sharpest decline (-23.8% or -2.7 million hours in one year). This result alone affected the overall Administrative and support service activities (-16.3% or -2.8 million hours).

Figure 5. Ten-year change in the cumulative number of hours worked

Unit: million of hours
Sources: Caisses sociales de Monaco, Monaco Statistics

Over the past decade, the number of hours worked has increased by more than 20 million (+23.8%). In 2025, it stays above the 100 million mark and represents the second-highest level on record.

2.3. The proportion of women among private-sector employees is on the rise

The private sector workforce comprises 36,485 men and 23,239 women at the end of 2025, i.e. a share of 38.9% women (up 1.1 percentage points on the previous year).

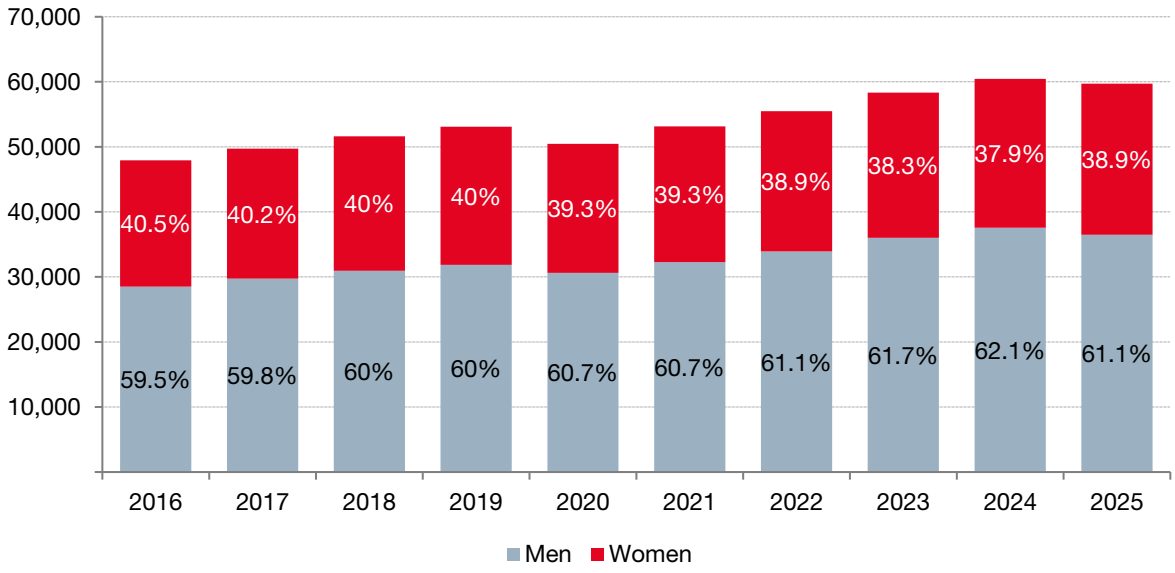

Table 4. Breakdown of private-sector employees by gender in 2025

	Number	Share	Variation 2024/25
Men	36,485	61.1%	-2.9%
Women	23,239	38.9%	1.5%
TOTAL	**59,724**	**100%**	**-1.2%**

Sources: Caisses sociales de Monaco, Monaco Statistics

352 additional women were recorded between 2024 and 2025 among private-sector employees (or +1.5%) vs 1,083 fewer men (-2.9%).

Figure 6. Ten-year change in the total number of private-sector employees and gender breakdown

Sources: Caisses sociales de Monaco, Monaco Statistics

Over the decade, on the other hand, the growth in female workforce has been slower than that of men (+19.6% compared with +28.0%). Consequently, the share of women has changed from 40.5% in 2016 to 38.9% in 2025.

Table 5. Share of female employees in the private sector by MES in 2025

	Number of women	Share of women	Var 2024/25 (percentage points)
Human health, education and administration	3,359	71.7%	-0.1
Other service activities	*3,019*	70.5%	-0.9
incl. Activities of households as employers of domestic personnel	*2,099*	*73.7%*	*-0.8*
Accommodation and food service activities	2,929	32.6%	0.5
Administrative and support service activities	2,391	24.8%	2.5
incl. Temporary work agency activities	*898*	*13.9%*	*1.6*
Financial and insurance activities	2,310	50.0%	-0.3
Professional, scientific and technical activities	2,185	47.0%	-0.4
Retail trade	1,644	53.5%	-0.2
Wholesale trade	1,354	48.5%	-0.2
Arts, sports and recreation	928	35.9%	-0.5
Industrial, productive and craft activities	927	36.9%	1.1
Real estate activities	675	35.4%	0.4
Transportation and storage	566	27.3%	-0.2
Construction	510	8.2%	0.3
IT, telecommunications and media	443	26.1%	-0.2
TOTAL	**23,239**	**38.9%**	**1.1**

Note: New MESs since the entry into force of the NAF 2025 on 1 January 2026
Sources: Caisses sociales de Monaco, Monaco Statistics

In 2025, only three sectors have more women than men among employees: Human health, education and administration (71.7% of women), Other service activities (70.5%, due to female-dominated domestic staff employed by households) and Retail trade (53.5%).

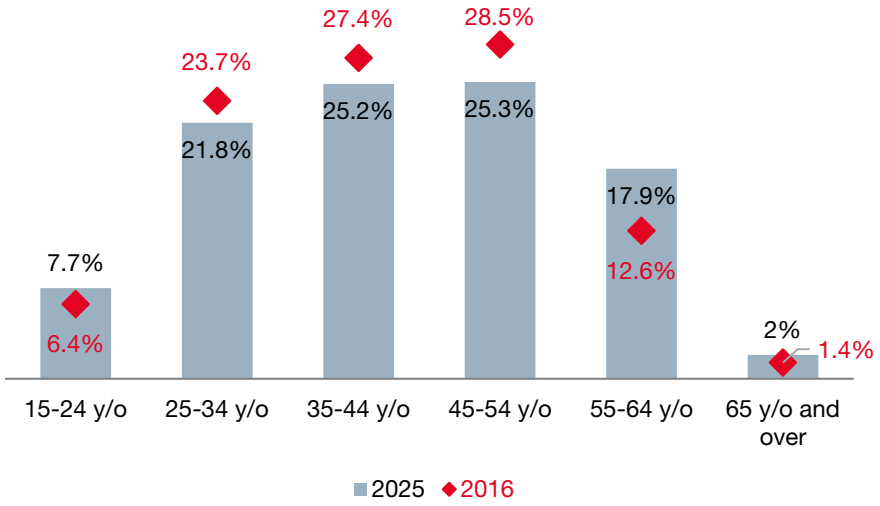

Financial and insurance activities show perfect parity whereas Construction employs more than 90% of men.

The decline in temporary work and the closure of an industrial establishment between 2024 and 2025 resulted in an increasing proportion of women in the corresponding MESs (+2.5 points in Administrative and support service activities and +1.1 points in Industrial, productive and craft activities).

2.4. A increasingly ageing workforce

In 2025, private-sector employees are 42.5 years old on average (42.6 years old for men and 42.3 years old for women).

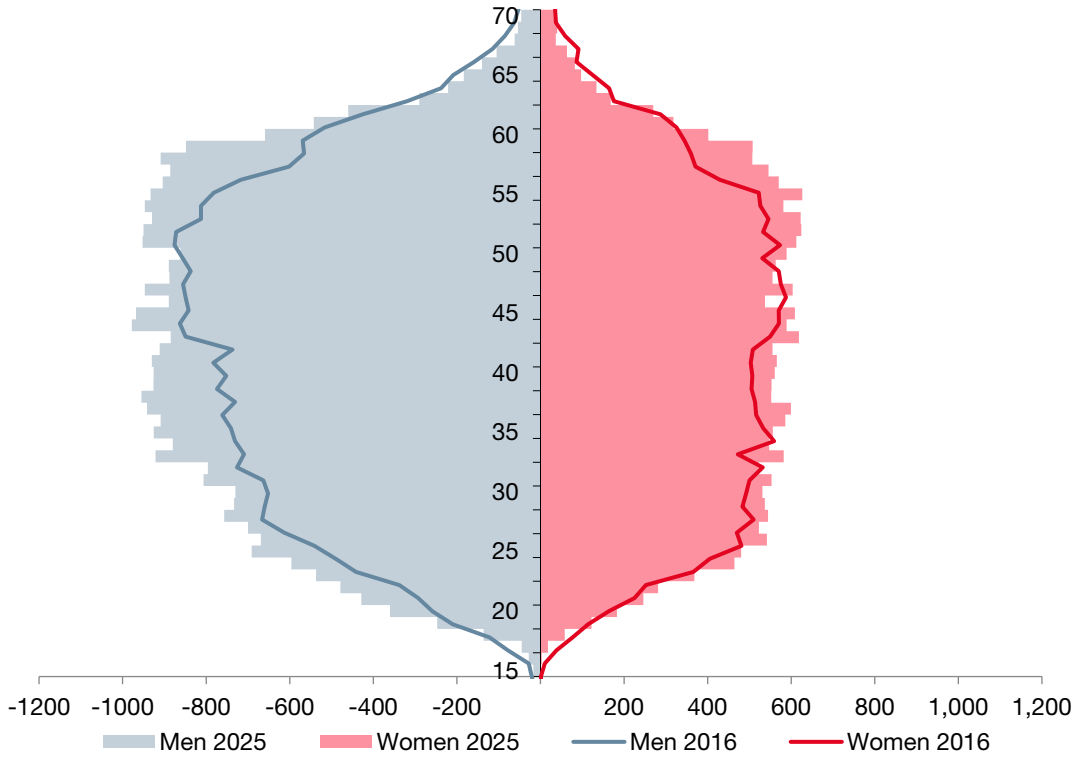

Figure 7. Breakdown of private-sector employees by age brackets in 2016 and 2025

Sources: Caisses sociales de Monaco, Monaco Statistics

While the proportion of employees aged between 25 and 54 has fallen over the last decade, the proportion of those aged 55 and over has risen sharply over the same period (by nearly 6 points). This trend has contributed to the ageing of the employed population over the last ten years. The rise in the share of the 15-24 age bracket was not enough to reverse this trend.

Figure 8. Age pyramid of the private-sector employees in 2016 and 2025

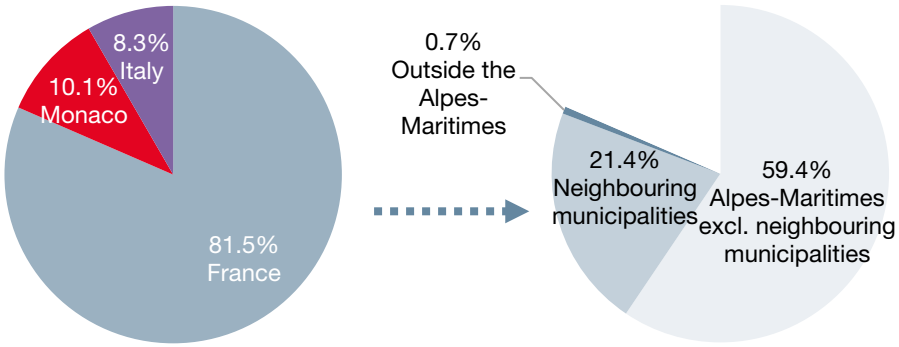

Sources: Caisses sociales de Monaco, Monaco Statistics

In ten years, the employed population has aged by nearly a year: the average age changed from 41.6 years old in 2016 to 42.5 years old in 2025. The increase in the number of workers aged 55 and over, combined with a relative decline in the number of employees under 45 over the period, explains this ageing trend.

2.5. Six out of ten employees live in the Alpes-Maritimes, outside the neighbouring municipalities

In 2025, nine private-sector employees out of ten are commuters (who work in Monaco without living there).

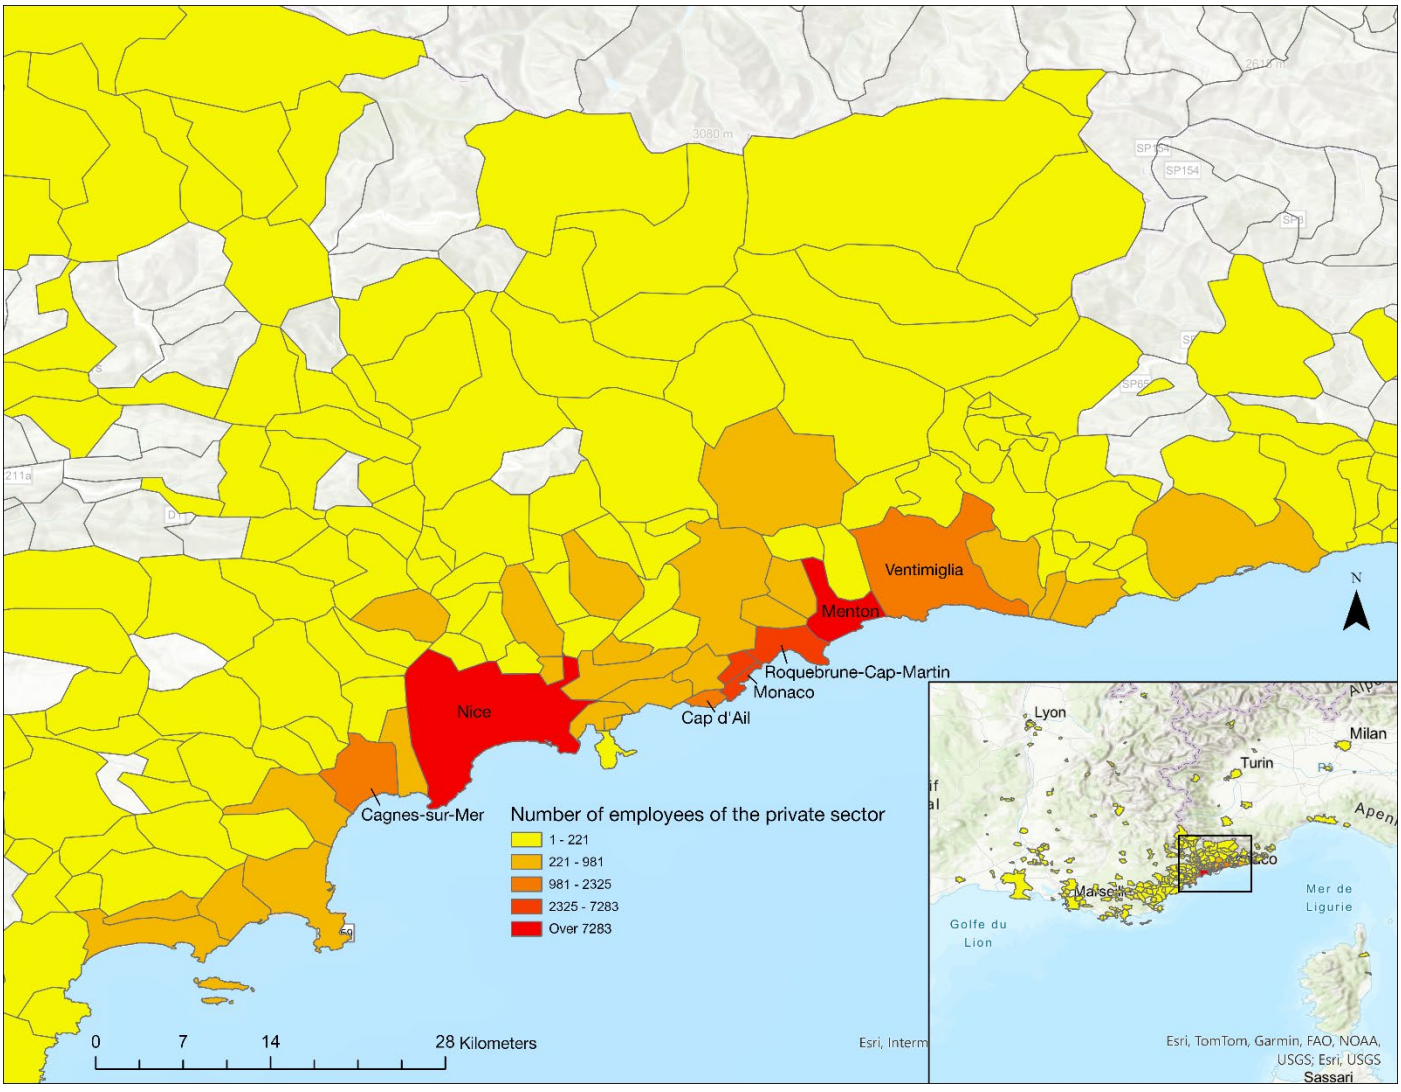

Figure 9. Breakdown of private-sector employees by place of residence in 2025

Note: unspecified places of residence are excluded
Sources: Caisses sociales de Monaco, Monaco Statistics

81.5% of employees, i.e. around 48,000 people, live in France at the end of the year. The Principality is both the place of work and residence for only one in ten employees (virtually 6,000 people). Nearly 5,000 workers (8.3%) live in Italy.

Figure 10. Number of private-sector employees by municipality of residence in 2025

Sources: Caisses sociales de Monaco, Monaco Statistics

With over 16,000 private-sector employees residing in Nice in 2025 (or 27%), the Alpes-Maritimes prefecture remains the first municipality of residence for workers. Menton and its 7,300 employees ranks second (12.4%) and overtakes Monaco (5,975 people, 10.1%). Then come the Beausoleil and Roquebrune-Cap-Martin municipalities (respectively 5,709 people, i.e. 9.7% and 4,422, i.e. 7.5%). More than 2,300 employees live in the Italian city of Ventimiglia (3.9%) which is ahead of Cap-d'Ail (2.8%). With over 800 resident workers (or 1.4%), La Turbie, another neighbouring municipality, ranks after Cagnes-sur-Mer, and, for the first time in 2025, also after Saint-Laurent-du-Var. Therefore, the distancing of employees from their Monegasque workplace – already observed in recent years – continues.

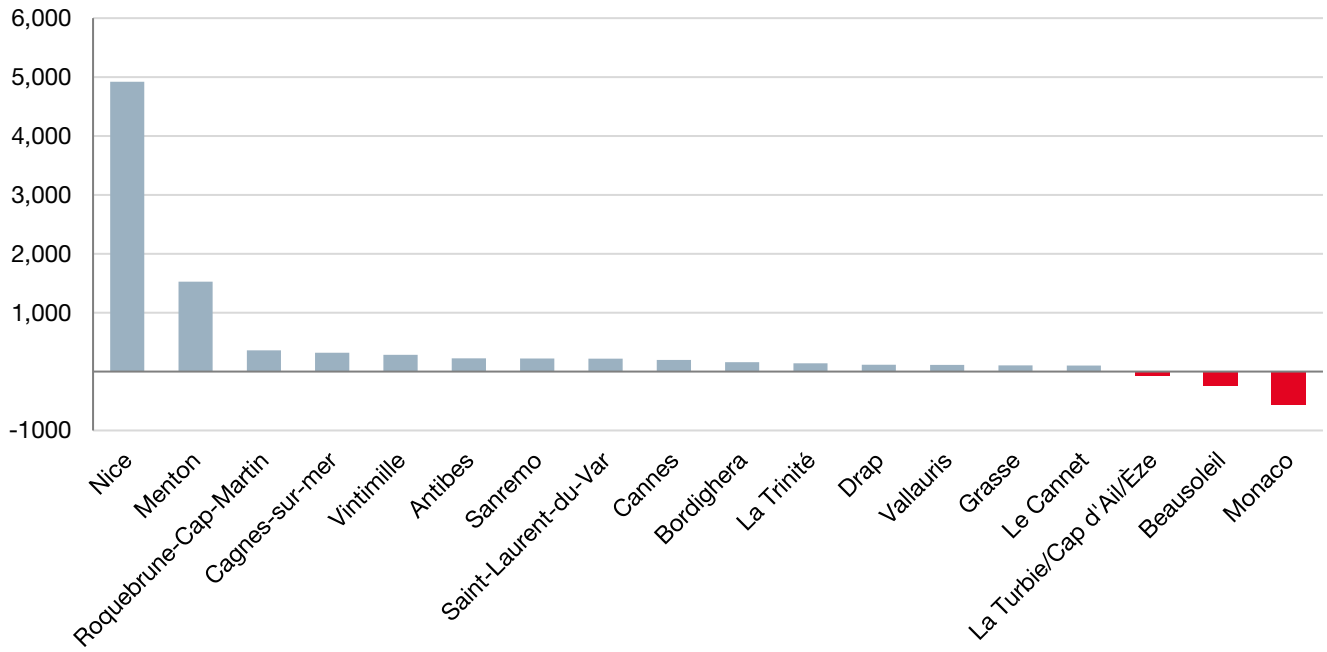

Table 6. Change in the distribution of private-sector employees by area of residence between 2017[5] and 2025

	2017	2025	Var 2017/25 (percentage point)
Alpes-Maritimes excluding neighbouring municipalities	52.4%	59.4%	7.1
Neighbouring municipalities	25.5%	21.4%	-4.2
Monaco	13.4%	10.1%	-3.2
Outside the Alpes-Maritimes (including Italy)	8.8%	9.1%	0.3
TOTAL	**100%**	**100%**	

Note: unspecified places of residence are excluded
Sources: Caisses sociales de Monaco, Monaco Statistics

The proportion of private-sector employees living in Monaco has continued to shrink over the past few years, standing at 13.4% in 2017[5] and 10.1% in 2025. The decline is even more pronounced in the neighbouring municipalities (-4.2 percentage points over the period). Simultaneously, the share of the workforce residing in the Alpes-Maritimes, outside the neighbouring municipalities, grew by 7.1 points and now accounts for almost 60% of employees. This growth corresponds to over 9,000 additional people between 2017 and 2025 working in Monaco and living outside the nearby cities.

Figure 11. Variation 2017-2025 in the number of private-sector employees by place of residence

Sources: Caisses sociales de Monaco, Monaco Statistics

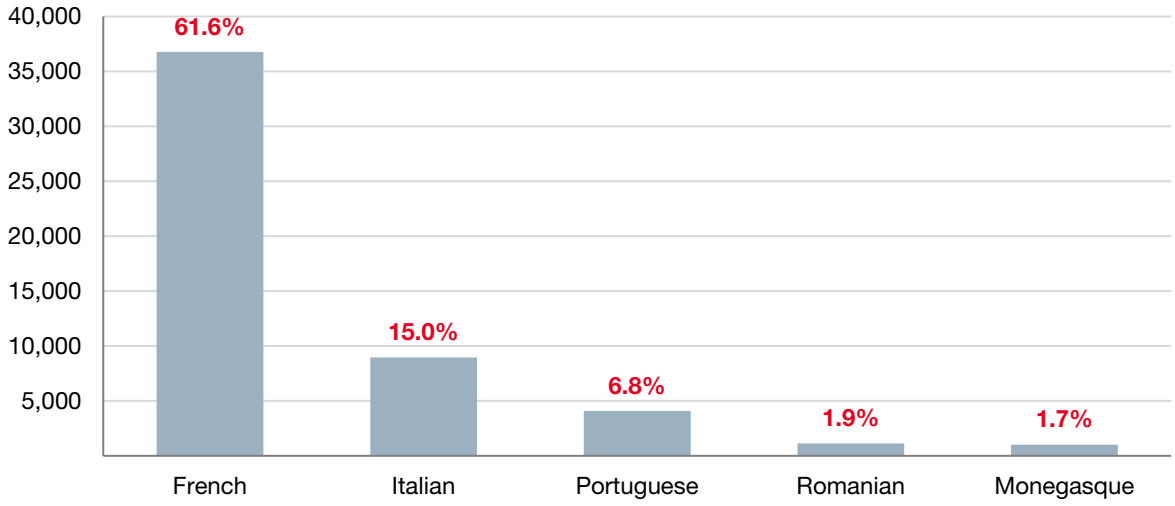

Over the 2017-2025 period, fifteen municipalities recorded at least 100 additional people working in the Monegasque private sector. The city of Nice accounts for over 4,900 more workers compared to 2017, by far the largest increase. Menton ranks second with 1,500 additional people. La Trinité, Drap and Le Cannet enter the ranking of municipalities that have gained at least 100 more employees over the period. On the other hand, the number of people who live and work in Monaco is down by 570. With the exception of Roquebrune-Cap-Martin, all neighbouring municipalities saw a decrease in the number of working residents, with a particularly sharp decline in Beausoleil (-240).

[5] Year from which place of residence is known with reliability.

2.6. 145 nationalities represented among private-sector employees

145 different nationalities are recorded among the private-sector employees in 2025, i.e. 20 more than ten years ago.

Figure 12. Breakdown of the five most represented nationalities among private-sector employees in 2025

Sources: Caisses sociales de Monaco, Monaco Statistics

French workers remain in the majority among private-sector employees in 2025, up to 61.6% of the workforce and accounting for over 36,700 people. Nearly 9,000 Italians are recorded, accounting for 15.0% of the workforce. Portuguese workers rank third and represent just over 4,000 people (6.8%). They are followed by Romanian employees, standing at 1.9%, i.e. more than 1,100 individuals. The Monegasques number 1,011 at the end of the year, also less than 2% of the private-sector workforce.

Table 7. Ten-year change in the number of private-sector employees among the ten most represented nationalities

	2016	2025	Variation 2016/25
French	30,683	36,769	19.8%
Italian	6,976	8,962	28.5%
Portuguese	3,211	4,082	27.1%
Romanian	318	1,129	255.0%
Monegasque	998	1,011	1.3%
Tunisian	331	688	107.9%
British	745	668	-10.3%
Filipino	559	644	15.2%
Moroccan	354	394	11.1%
Spanish	277	361	30.3%

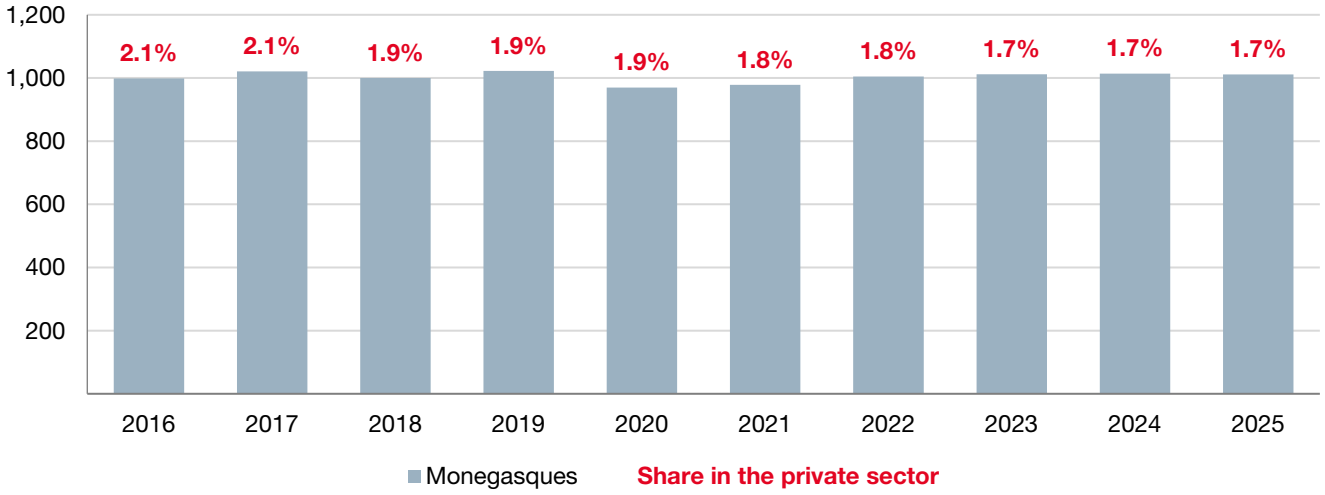

Sources: Caisses sociales de Monaco, Monaco Statistics

The overall increase of 24.6% in the number of private-sector employees over ten years hides disparities according to nationality. Thus, between 2016 and 2025, the number of employees of French nationality has increased by more than 6,000 individuals, but at a slower rate (+19.8%) than that observed overall. Conversely, Italian and Portuguese workers have grown more rapidly than globally (+28.5% and +27.1% respectively). This trend is even more pronounced among Romanian employees whose number has multiplied by 3.6 in ten years, and among Tunisians, who have doubled their staff over the period. The British, for their part, have seen their workforce shrink by more than 10% since 2016. Meanwhile, the number of Monegasque nationals among the private-sector population has remained fairly stable.

2.7. A number of Monegasques employed in the private sector that remains constant

At the end of 2025, there were 1,011 Monegasques employed in the private sector, accounting for 1.7% of the total workforce. 629 men and 382 women make up this population, slightly more male-dominated than in the private sector as a whole (37.8% of women among Monegasque nationals vs 38.9% overall).

Figure 13. Ten-year change in the number and share of Monegasques employed in the private sector

Sources: Caisses sociales de Monaco, Monaco Statistics

The number of Monegasques among the private-sector employees has fluctuated around one thousand people each year of the last decade. It stood at 998 in 2016, i.e. 13 additional Monegasque nationals in ten years. As the number of foreign workers has grown faster than that of Monegasques, their proportion has fallen over the last ten years (-0.4 points compared to 2016). This proportion, however, has remained stable at 1.7% since 2023.

Furthermore, the average age of Monegasque employees (42.6 years old) is very close to that observed in the private sector as a whole.

Table 8. Breakdown of Monegasque employees by MES in 2025

	Number	Share
Accommodation and food service activities	425	42.0%
Arts, sports and recreation	88	8.7%
Human health, education and administration	75	7.4%
Financial and insurance activities	64	6.3%
Other service activities	60	5.9%
Professional, scientific and technical activities	58	5.7%
Retail trade	41	4.1%

Transportation and storage	29	2.8%
Wholesale trade	28	2.8%
Administrative and support service activities	26	2.5%
IT, telecommunications and media	22	2.2%
Construction	19	1.9%
TOTAL	**1,011**	**100%**

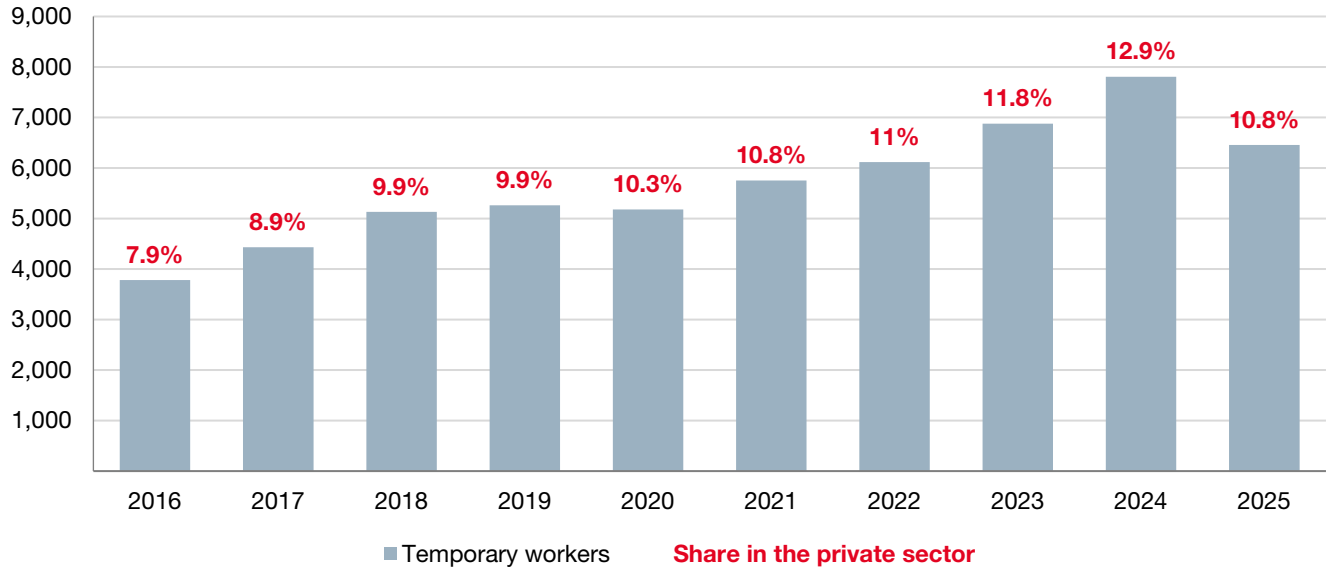

Sources: Caisses sociales de Monaco, Monaco Statistics

With 425 Monegasque employees in 2025, Accommodation and food service activities is the largest private-sector employer of nationals (as a reminder, a major player in the economy is bringing together all its employees, particularly those in the gambling sector, in this MES). Then come Arts, sports and recreation in which 88 Monegasques work. Together, these two sectors account for just over half (50.7%) of the Monegasque employees.

2.8. Temporary work activities, although down, are still at a high level

6,458 people are employed in temporary work activities in 2025, i.e. 1,350 fewer than in 2024 (-17.3%).

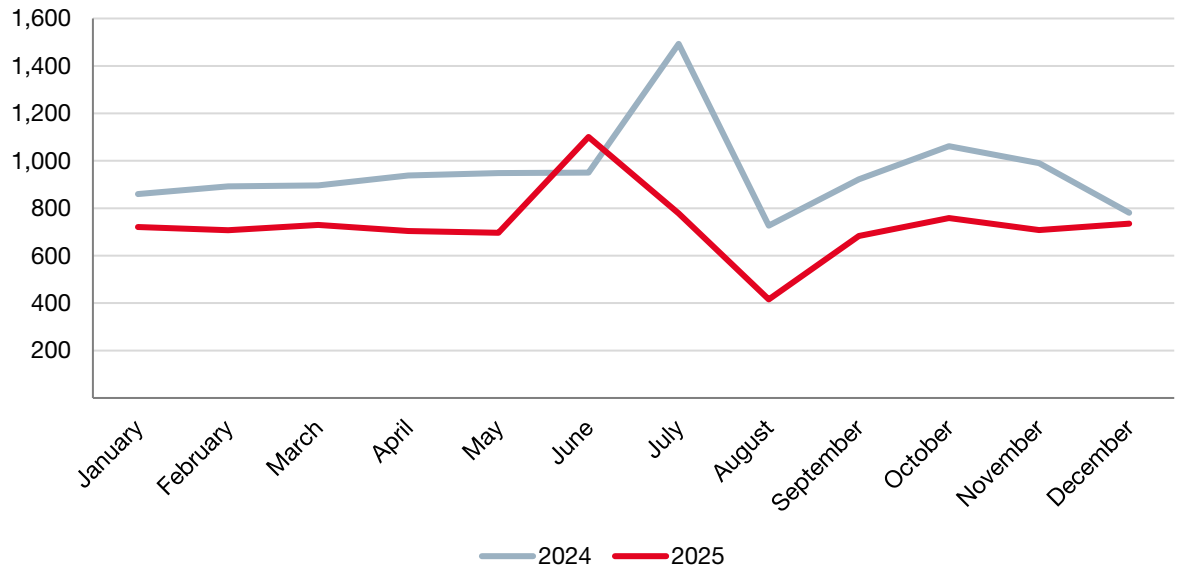

Figure 14. Ten-year change in the number and share of temporary workers in the private sector

Sources: Caisses sociales de Monaco, Monaco Statistics

Between 2016 and 2024, the number of temporary workers has risen sharply, accounting for up to 12.9% of the total private-sector employed population and doubling its workforce. Due to the completion of major construction projects in 2025, the temporary workforce fell back and returned to a level corresponding to its third-highest ever, behind 2023 and 2024. Over the decade, 2,675 additional employees are recorded among the temporary work population, a growth of 70.7%.

Figure 15. Monthly change in the number of hours worked in temporary employment in 2024 and 2025

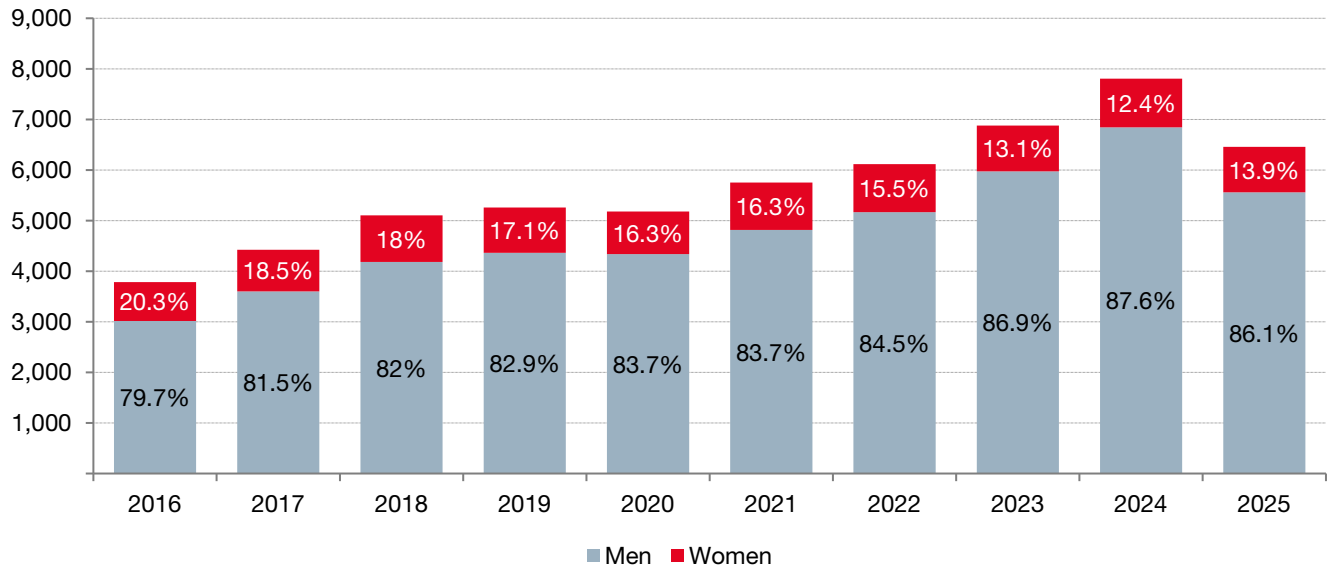

Sources: Caisses sociales de Monaco, Monaco Statistics

With the exception of June, the number of hours worked in temporary activities is lower each month than in 2024, reflecting the slowdown in the temporary work sector following a record year. However, in December 2025, the number of hours worked returned to a level comparable to that seen a year earlier.

Temporary workers: this section considers employees in the subclass *78.20G – Temporary employment agency activities of the new* "NAF 2025" classification, regardless of the sector in which they carry out their temporary work assignments. The permanent employees of the 18 temporary work agencies in the Principality are also included in this population, although they do not have temporary status.

In 2025, the temporary workforce comprises 5,559 men and 898 women, i.e. 86.1% of male employees.

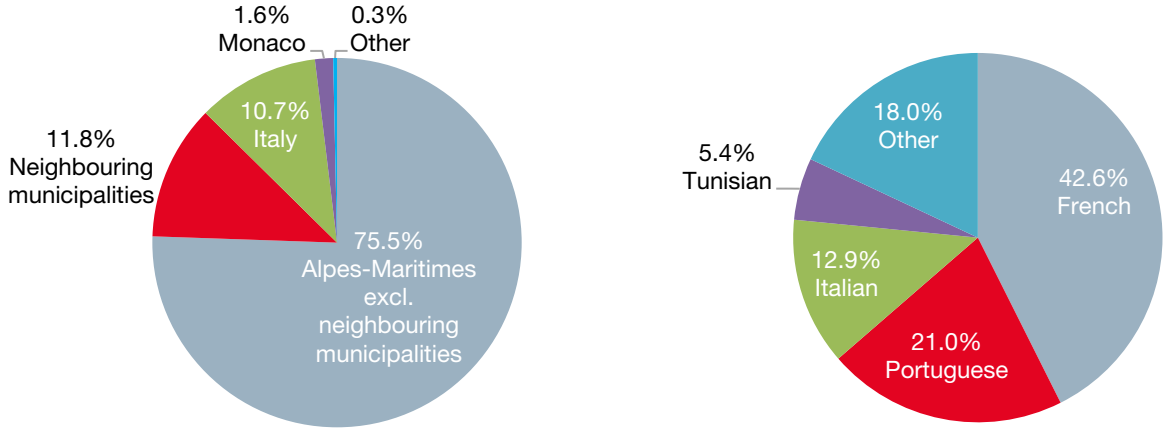

Figure 16. Ten-year change in the gender distribution among temporary workers

Sources: Caisses sociales de Monaco, Monaco Statistics

The proportion of women among the temporary workforce is considerably lower than that observed across the private sector as a whole (13.9% vs 38.9% in 2025). Their representation is, however, on the rise compared with 2023 and 2024, due to the decline in the number of male temporary workers, most of whom carry out assignments in the construction sector. The proportion of women in temporary work is nevertheless more than 7 percentage points lower than it was ten years ago.

Figure 17. Place of residence and nationality of temporary workers in 2025

Sources: Caisses sociales de Monaco, Monaco Statistics

More than 98% of temporary workers live outside Monaco at the end of 2025. Three quarters (75.5%) reside in the Alpes-Maritimes excluding the neighbouring municipalities whereas only 1.6% live in the Principality. The neighbouring municipalities are the place of residence for 11.8% of temporary workers, and Italy is for 10.7%.

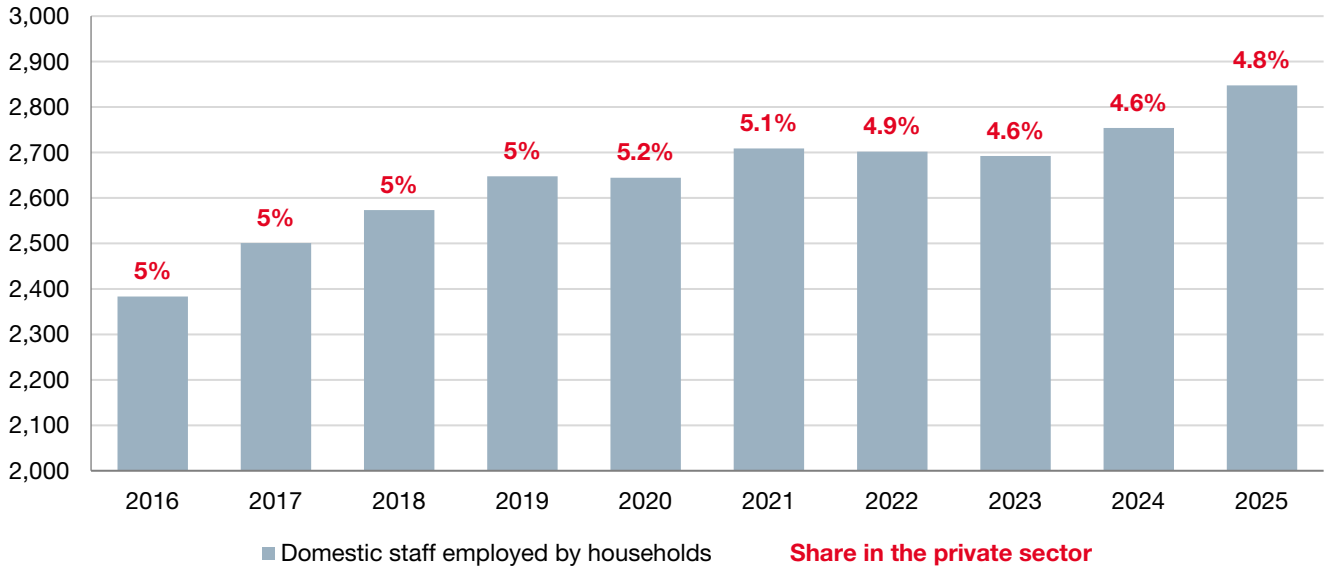

The French nationals account for 42.6% of the temporary workforce, thus being the first nationality. This share is, however, around 20 points lower than that observed across the private sector as a whole. Comprising 12.9% of the temporary workers, Italians are also under-represented compared with the general population (15.1%). Conversely, Tunisian workers are over-represented in temporary work and rank third among the nationalities. Finally, around ten temporary workers are of Monegasque nationality.

Temporary work employees are 40.6 years old on average in 2025, i.e. about two years less than in the private sector as a whole.

2.9. Nearly 2,900 employees, mostly women, are employed by households

At the end of 2025, the domestic staff employed by households comprises 2,848 private-sector employees (4.8% of the total).

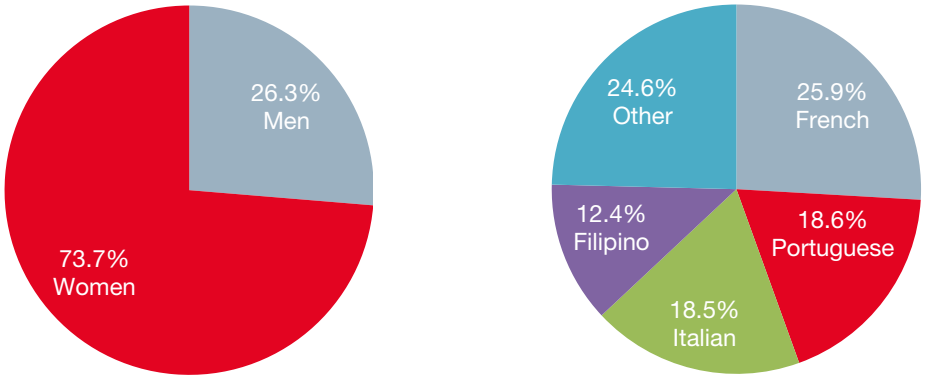

Figure 18. Ten-year change in the household-employed staff in the private sector

Sources: Caisses sociales de Monaco, Monaco Statistics

In ten years, the number of household employees grew by 19.5%, recording 464 additional people in 2025 compared with 2016. This category of workers has accounted for between 4.6% and 5.0% of the total private-sector workforce each year over the last decade.

Figure 19. Gender and nationality of household-employed staff in 2025

Sources: Caisses sociales de Monaco, Monaco Statistics

Women account for three quarters of the domestic staff employed by households (73.7% in 2025) and one in four employees is of French nationality (25.9%). The share of French workers in this category is much lower than that observed across the entire private-sector workforce (six out of ten French nationals). Conversely, Portuguese workers are over-represented, as well as Italians. Filipino nationals come in fourth place and account for 12.4% of household employees.

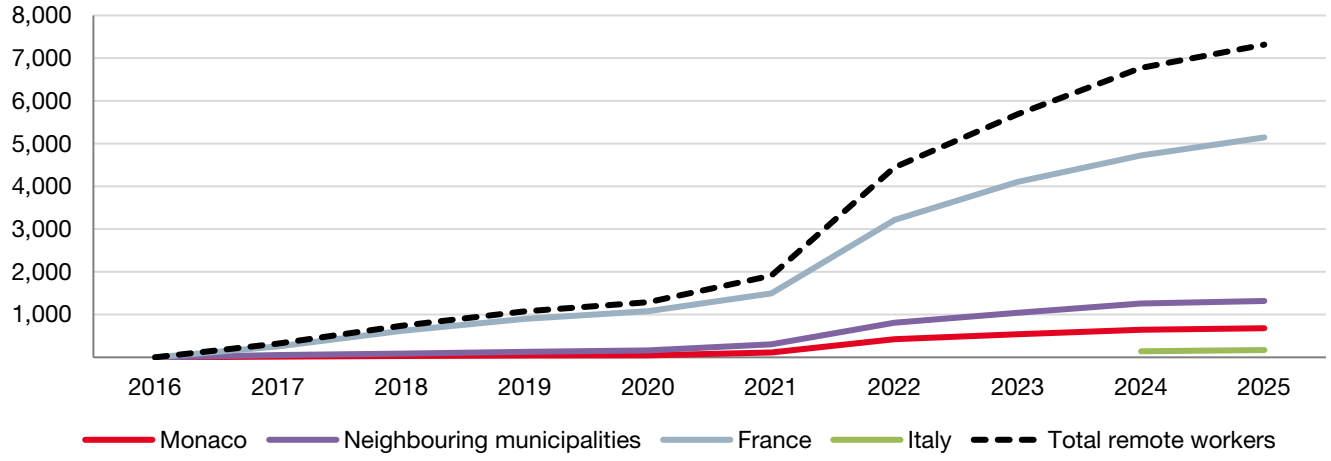

Furthermore, this workforce is older on average than the rest of the private sector (49.3 years old vs 42.5 years old).

Domestic staff employed by households: this section covers employees in subclass *97.00Y – Activities of households as employers of domestic personnel* of the new "NAF 2025" classification. This category includes, among others, private secretaries or accountants, cleaners, nurses, domestic staff, chauffeurs, sailors, etc.

2.10. More than 7,300 remote workers by the end of 2025 in the private sector

At the end of 2025 and after more than seven years of implementation, 463 private-sector companies are authorised to use the framework for remote working, of which 360 actually use it (28 more than in 2024). Remote working involves 7,317 employees as at 31 December, i.e. 544 additional people compared to the previous year (+8.0%).

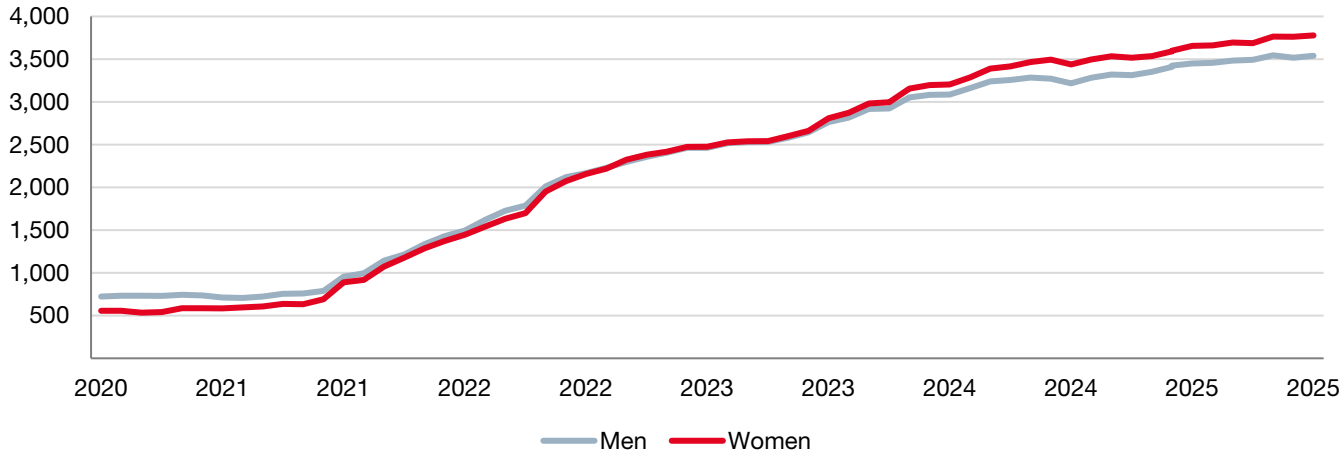

Figure 20. Change in the number of remote workers in the private sector by place of residence

Sources: Department of Employment, Monaco Statistics

70.3% of remote workers live in France, outside the neighbouring municipalities at the end of 2025, corresponding to 5,146 people. 1,319 employees live in a neighbouring municipality (18.0%), 681 reside in the Principality (9.3%) and 171 people work from Italy (2.3%).

Figure 21. Change in the number of remote workers in the private sector by gender[6]

Sources: Department of Employment, Monaco Statistics

The remote working population has become progressively more female over the last five years. The number of women among remote workers has thus become higher than men since the beginning of 2024. In December 2025, there are 3,778 female remote workers (51.6%) versus 3,539 men. The gender distribution among remote workers does not reflect that of the overall salaried population, and not all professions within the private sector are represented among remote workers.

The implementation of **remote working** requires the establishment of a framework that must be approved by the Department of Employment. This results in the modification of the work permit for the employee concerned (Law 1.429 of 4 July 2016 on telework), who must be domiciled in Monaco, France, or, since June 2024, in Italy. Indeed, in 2024, the Principality of Monaco is evolving the conditions for remote working by allowing it for employees residing in Italy (Amendment No. 1 to the General Social Security Agreement between the Principality of Monaco and the Italian Republic, dated 12 February 1982, ratified by the authorities of both countries, came into effect on 1 June 2024).

[6] The gender breakdown of remote workers is known since the end of 2020.

3. Private-sector employers

3.1. The number of private-sector employers is trending upwards

The Principality of Monaco has 6,378 private-sector employers by the end of 2025, a slight increase compared to the previous year (23 more structures in one year, or +0.4%).

Table 9. Number of private-sector employers and breakdown by employee size category in 2025

	Number	Share	Variation 2024/25
Activities of households as employers	2,680	42.0%	0.6%
Under 5 employees	*2,630*	*41.2%*	*0.0%*
5 employees and over	*50*	*0.8%*	*47.1%*
Employers excluding households	3,698	58.0%	0.2%
Under 5 employees	*2,118*	*33.2%*	*0.7%*
5 to 9 employees	*692*	*10.8%*	*-2.1%*

Transportation and storage	120	1.9%	1.7%
Industrial, productive and craft activities	111	1.7%	-1.8%
Human health, education and administration	104	1.6%	2.0%
Total	**6,378**	**100%**	**0.4%**
Total excl. Activities of households as employers	***3,698***	***58.0%***	***0.2%***

Note: New MESs since the entry into force of the NAF 2025 on 1 January 2026
Sources: Caisses sociales de Monaco, Monaco Statistics

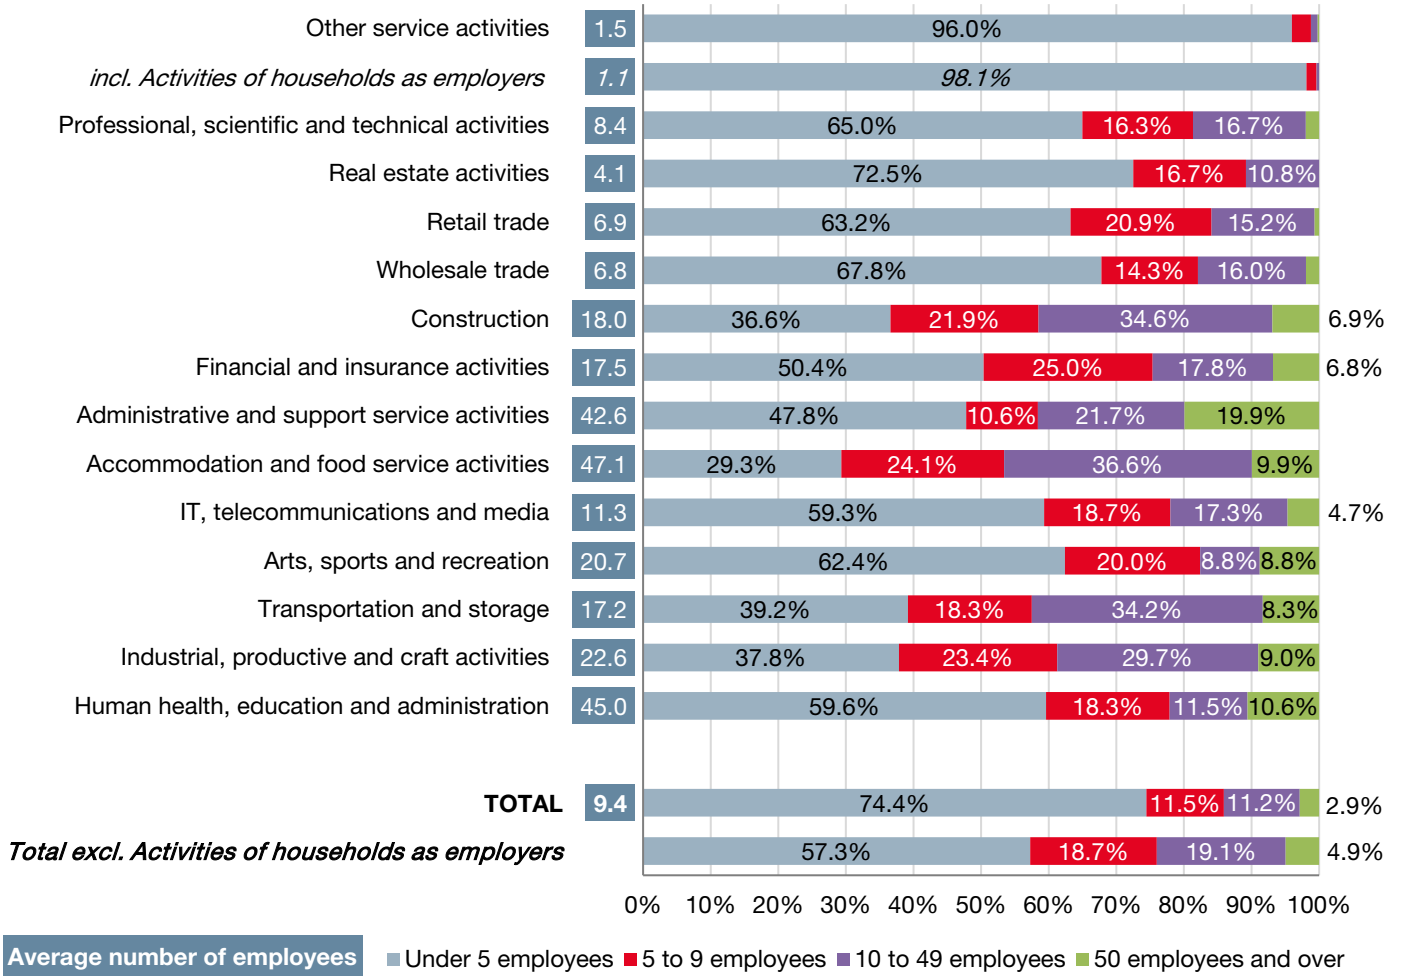

With nearly 2,900 structures in 2025, almost all of which are household employers of domestic staff, the Other service activities make up the largest group of employers (44.9% of the total). Then come the Professional, scientific and technical activities (557 employers, i.e. 8.7%) experiencing the sharpest growth over the past year with +4.7% (corresponding to 25 additional entities). At the same time, the Construction sector is showing the opposite trend with a decline of 4.7% (-17 entities).

Household employers are those employing workers classified under the subclass *9700Y - Activities of households as employers of domestic personnel* from the new French Classification of Activities "NAF 2025". This category includes, among others, private secretaries or accountants, cleaners, nurses, domestic staff, chauffeurs, sailors, etc.

3.2. Private-sector employers number just under 10 employees on average

Although the Monegasque economy consists mainly of businesses with fewer than five employees, the structure of employers varies significantly depending on the sector of activity.

Figure 22. Breakdown of private-sector employers by employee size category and MES in 2025

Reading: employers in Other service activities have 1.5 employees on average in 2025; in this MES, employers of less than 5 employees represent 96.0% of entities.
Note: New MESs since the entry into force of the NAF 2025 on 1 January 2026
Sources: Caisses sociales de Monaco, Monaco Statistics

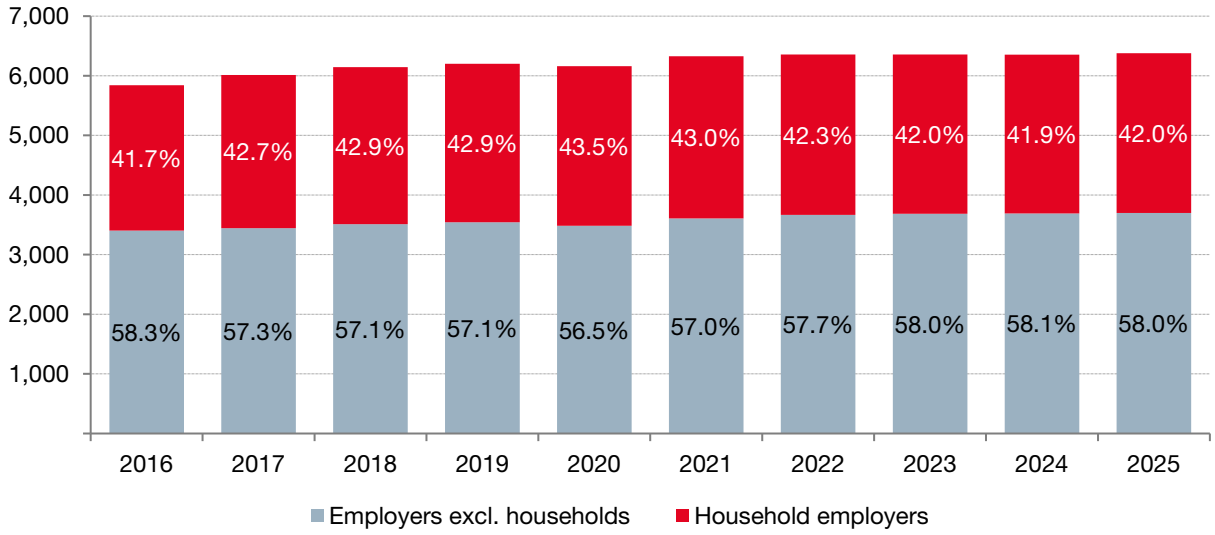

With the exception of Accommodation and food service activities, employers with fewer than five employees are the most common category across all sectors. The proportion of companies of this size ranges from 36.6% in the Construction sector to 96.0% in Other service activities, representing virtually the entire Activities of households as employers (98.1%). Companies with 50 or more employees account for 10 to 20% of employers in three MESs: Administrative and support service activities (including temporary work agencies), Accommodation and food service activities and Human health, education and administration.

On average, private-sector employers as a whole have 9.4 employees by the end of 2025. Excluding Activities of households as employers, this figure rises to 15.4. It is, logically, the Other service activities sector that has the lowest average number of employees (1.5), affected by households employing domestic staff which have only 1.1 employees on average. Companies operating in Administrative and support service activities, in Accommodation and food service activities and in Human health, education and administration have an average workforce of more than 40 people in 2025, ahead of those of Industrial, productive and craft activities and those of Arts, sports and recreation (22.6 and 20.7 employees on average respectively).

3.3. 536 additional employers in ten years

With 6,378 private-sector employers at the end of 2025 compared with 5,842 in 2016, the number of organisations employing staff has increased by 9.2% over ten years, i.e. 536 additional structures over the period.

Figure 23. Ten-year change in the number of private-sector employers

Sources: Caisses sociales de Monaco, Monaco Statistics

Although the number of employers has remained stable over the last five years, it has increased by an average of 1.0% per year over the past decade. The breakdown between households employing domestic staff and non-household employers has also remained relatively stable over the last decade, with the exception of 2020–2021, which corresponded to the health crisis, during which the proportion of households employing domestic staff rose slightly.

Table 11. Ten-year change in the number of private-sector employers by MES

	Variation 2016-25 in value	Variation 2016-25 in volume
Other service activities	262	10.1%
incl. Activities of households as employers	243	10.0%
Professional, scientific and technical activities	103	22.7%
Construction	59	20.5%
Financial and insurance activities	54	25.7%
Administrative and support service activities	42	22.8%
IT, telecommunications and media	22	17.2%
Wholesale trade	15	3.8%
Accommodation and food service activities	10	5.5%
Human health, education and administration	5	5.1%
Arts, sports and recreation	0	0.0%
Retail trade	0	0.0%
Transportation and storage	-6	-4.8%
Industrial, productive and craft activities	-10	-8.3%
Real estate activities	-20	-4.1%
Total	**536**	**9.2%**
Total excl. Activities of households as employers	***293***	***8,6%***

Note: New MESs since the entry into force of the NAF 2025 on 1 January 2026
Sources: Caisses sociales de Monaco, Monaco Statistics

Driven by household employers, the Other service activities have seen the sharpest rise in the number of employers since 2016 (+262). Then come the Professional, scientific and technical activities (+103 or +22.7%). Retail trade and Arts, sports and recreation have exactly the same number of employers as they did ten years ago, whilst three MESs have fewer: Transportation and storage, Industrial, productive and craft activities and Real estate activities.

4. Civil service workforce

4.1. Almost 5,400 people work in the Civil service at the end of 2025

As at 31 December 2025, the Monegasque Civil service comprises 5,393 employees, up 3.0% on the previous year, i.e. 155 additional people[7].

Table 12. Number of Civil service employees by administrative attachment in 2025

	Number	Share	Variation 2024/25
Governmental administration, including:	4,007	74.3%	1.7%
Ministry of Interior	*2,117*	*39.3%*	*1.7%*
Ministry of Public Works, the Environment and Urban Development	*795*	*14.7%*	*2.1%*
Ministry of State	*364*	*6.7%*	*3.7%*
Ministry of Finance and Economy	*324*	*6.0%*	*0.9%*
Ministry of Health and Social Affairs	*317*	*5.9%*	*0.6%*
Ministry of Foreign Affairs and Cooperation	*90*	*1.7%*	*-2.2%*
Municipality	816	15.1%	6.9%
Prince's Palace	220	4.1%	1.9%
Department of Justice	180	3.3%	1.1%
Committees, assemblies and constitutional bodies, Independent Authorities, civil servants appointed in public organisations, Foundations and other entities	170	3.2%	19.7%
TOTAL	**5,393**	**100%**	**3.0%**

Note: data for 2024 has been enhanced following the inclusion of some seasonal staff members affiliated to the Municipality.
Sources: Human Resources and Training Department, Monaco Statistics

More than 4,000 civil servants are affiliated to the Governmental administration, i.e. three quarters of the total Civil service staff. Having 2,117 employees, the Ministry of Interior —which includes, in particular, the Police Department and the Department of Education, Youth and Sport — alone accounts for almost 40% of the public workforce. The Municipality's employees, numbering 816, represent around 15% of the total staff, a proportion that is similar to that of the Ministry of Public Works, the Environment and Urban Development (14.7% or 795 people). The Prince's Palace employs 220 civil servants by the end of 2025, while the Department of Justice has 180. The Committees, assemblies and constitutional bodies, Independent Authorities, civil servants appointed in public organisations, Foundations and other entities together comprise 170 civil servants.

Between 2024 and 2025, the Governmental administration recorded 68 more employees (+1.7%). The Municipality ranks second, with an increasing staff of 53 people compared to 2024 (+6.9%). All Ministries within the Governmental administration are experiencing growth, with the exception of the Ministry of Foreign Affairs and Cooperation (2 fewer civil servants i.e. -2.2%). The largest year-on-year increase in volume (+19.7%) relates to Committees, assemblies and constitutional bodies, Independent Authorities, particularly through the strengthening of the Monegasque Financial Security Authority's workforce.

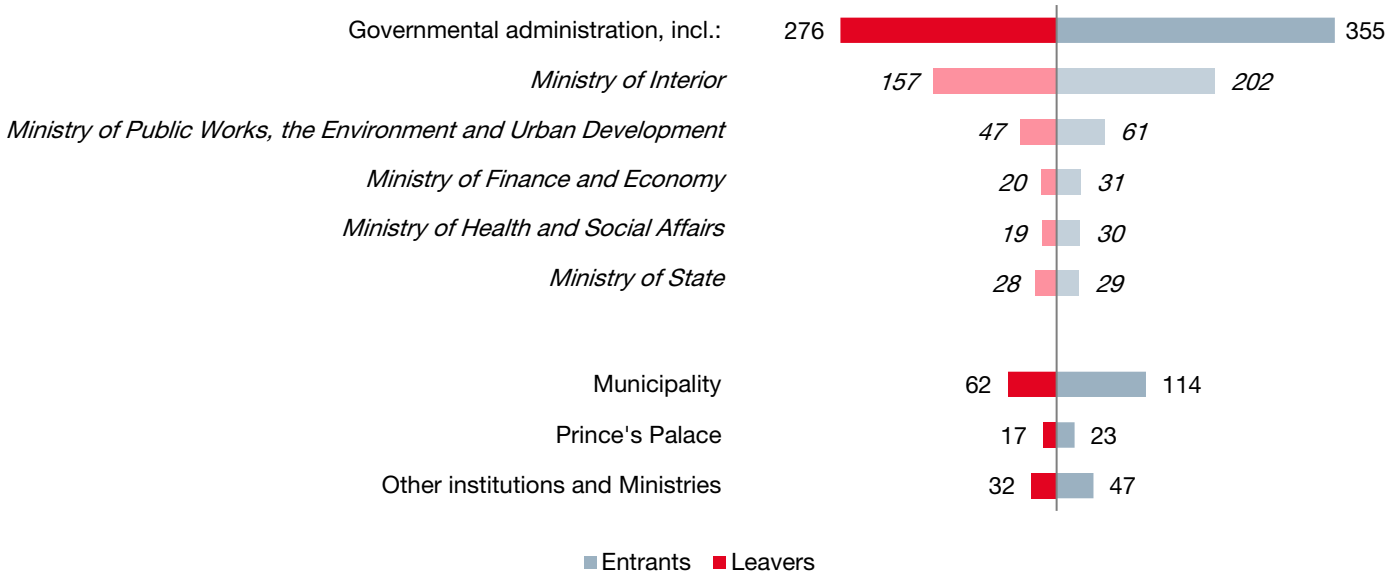

Rule for counting civil servants: only the personnel in activity is taken into account, that is, employees in an "active" position (the "detached service" and "availability or unpaid leave" positions are excluded). Substitutes replacing an employee on sick or maternity leave are not taken into account, as opposed to substitutes filling in for open positions or unpaid leave.

[7] Data for 2024 has been enhanced following the inclusion of some seasonal staff members affiliated to the Municipality.

4.2. 537 new civil servants recruited in 2025 and 382 departures

After 382 departures and 537 recruitments, the Monegasque Civil service recorded a net increase of 155 employees between 2024 and 2025.

Figure 24. Number of entrants and leavers in the Civil service by administrative attachment between 2024 and 2025

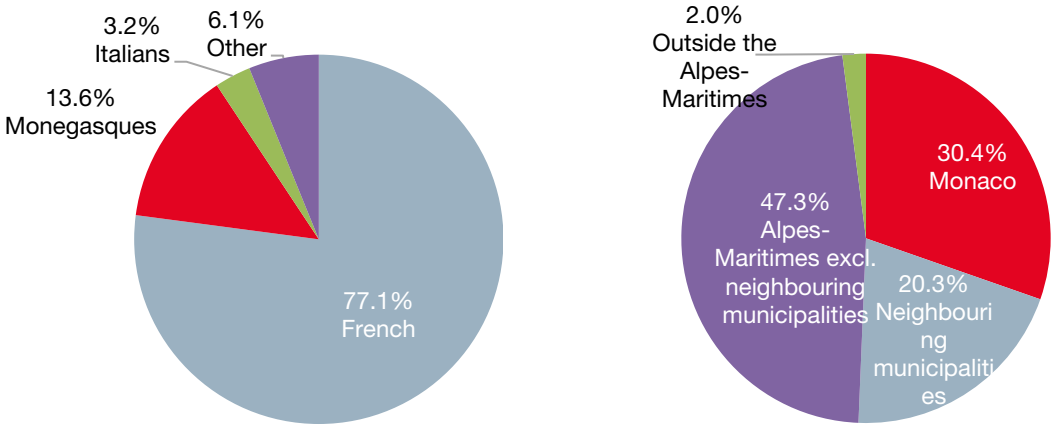

Sources: Human Resources and Training Department, Monaco Statistics

Among the 537 people who joined the Civil service between 2024 and 2025, 355 are affiliated to the Governmental administration, half of whom (202) joined the Ministry of Interior. Civil servants who have left the public sector, aged 47.2 on average, are mostly men (up to 55.5%).

With 273 men for 264 women, the population of new recruits is gender-balanced. These new civil servants are 34.4 years old on average and mostly occupy category C positions (52.7% of them, against 28.9% for category A and 18.4% for category B).

Figure 25. Nationality and place of residence of new civil servants in 2025

Sources: Human Resources and Training Department, Monaco Statistics

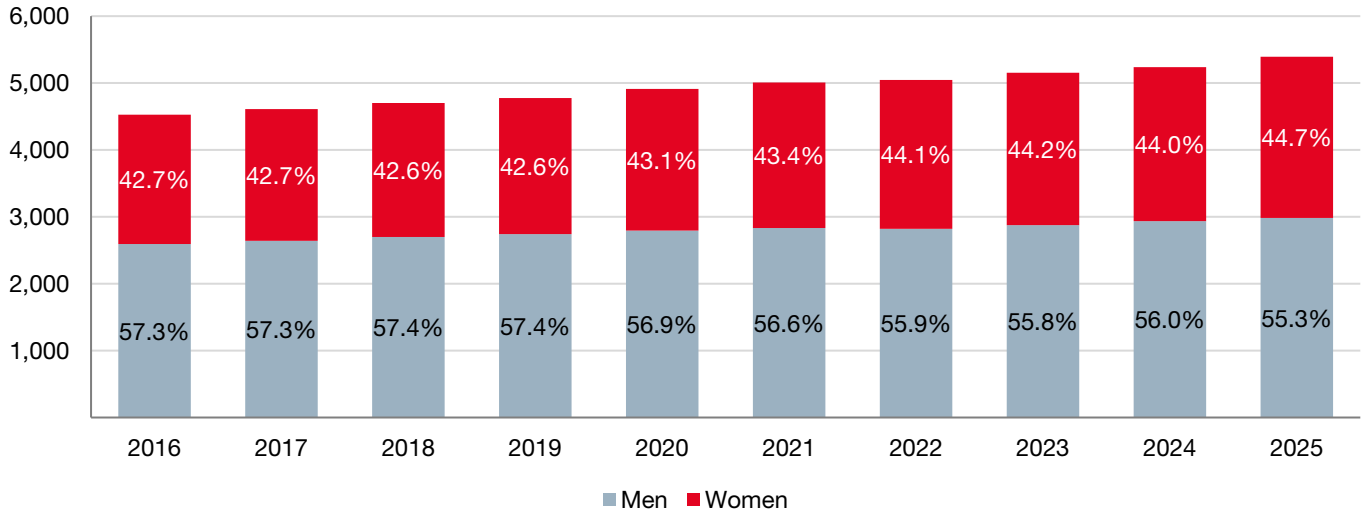

More than three-quarters of the new recruits to the public service are of French nationality while Monegasques account for 13.6% of the entrants, or 73 people.

Nearly half of the new civil servants live in the Alpes-Maritimes outside the neighbouring municipalities. Three in ten people reside in the Principality and two out of ten live in one of the neighbouring municipalities.

4.3. The Civil service workforce has increased by 19.1% in ten years

Between 2016 and 2025, the Monegasque Civil service headcount grew by 19.1%, adding 865 employees over the decade.

Figure 26. Ten-year change in the number of civil servants and gender breakdown

Note: data for 2024 has been enhanced following the inclusion of some seasonal staff members affiliated to the Municipality.
Sources: Human Resources and Training Department, Monaco Statistics

The number of civil servants has risen steadily over the last ten years. On average, this growth stands at 2.0% per year over the period. At the same time, the proportion of women among public sector employees has also increased: they account for 44.7% of the workforce in 2025, a 2-point increase compared to ten years ago.

Table 13. Number and share of women in the Civil service by administrative attachment in 2025 and ten-year change

	Number of women	Share of women	Var 2016-25 (percentage point)
Governmental administration, including:	1,689	42.2%	2.1
Ministry of Interior	*838*	*39.6%*	*1.3*
Ministry of Public Works, the Environment and Urban Development	*138*	*17.4%*	*1.4*
Ministry of State	*199*	*54.7%*	*-1.0*
Ministry of Finance and Economy	*220*	*67.9%*	*3.5*
Ministry of Health and Social Affairs	*237*	*74.8%*	*2.5*
Ministry of Foreign Affairs and Cooperation	*57*	*63.3%*	*0.0*
Municipality	446	54.7%	-0.2
Prince's Palace	82	37.3%	6.7
Department of Justice	97	53.9%	-4.7
Committees, assemblies and constitutional bodies, Independent Authorities, civil servants appointed in public organisations, Foundations and other entities	95	55.9%	-3.8
TOTAL	**2,409**	**44.7%**	**2.0**

Sources: Human Resources and Training Department, Monaco Statistics

In 2025, the Ministry of Health and Social Affairs remains the most female-dominated, with more than three quarters of women. It is followed by the Ministry of Finance and Economy and by the Ministry of Foreign Affairs and Cooperation (67.9% and 63.3% of women respectively). In contrast, the Ministry of Public Works, the Environment and Urban Development remains the most male-dominated, having only 17.4% of female employees, due to traditionally male occupations – such as parking attendants, gardeners, or construction site operators.

4.4. Nearly a quarter of Monegasque nationals in the Civil service

In the Civil service, as in the Monegasque labour market in general, the French remain the largest national group.

Table 14. Number of civil servants by nationality and share of women in 2025

	Number of employees	Share of women
French	3,826	38.3%
Monegasques	1,249	60.4%
Other nationalities	318	59.4%
Total	**5,393**	**44.7%**

Sources: Human Resources and Training Department, Monaco Statistics

In 2025, the number of employees of French nationality is 3,826 in the public sector, compared with 1,249 Monegasque nationals. The other 318 civil servants are of a different nationality.

Women are under-represented among the French civil servants: only 38.3% of them are French female workers in 2025. Conversely, with more than 60% of women, Monegasque public employees are mostly female. This proportion is also found among civil servants of other nationalities.

Figure 27. Ten-year change in the civil workforce and breakdown by nationality

Sources: Human Resources and Training Department, Monaco Statistics

Whilst the number of French nationals in the civil service has risen steadily over the last ten years, the number of Monegasque nationals has fallen slightly.

In 2025, nearly 71% of the workforce are of French nationality, an increase of 0.6 percentage points compared with 2024, or +144 people. Meanwhile, the Civil service has 9 fewer Monegasques in one year. As in the private sector, the number of foreign workers has grown faster than that of Monegasque nationals over the past decade. As a result, the Monegasques account for 23.2% of the workforce in 2025, versus 29.9% in 2016. At the same time, French nationals had accounted for fewer than two thirds of the Civil service workforce. Reaching 5.9% in 2025, the share of employees of other nationalities, meanwhile, has risen slightly.

4.5. A slight decline in the average age

In 2025, civil servants are 43.2 years old on average, versus 43.5 years in 2024. In addition, men remain slightly younger than women on average within this population (42.9 years and 43.5 years respectively).

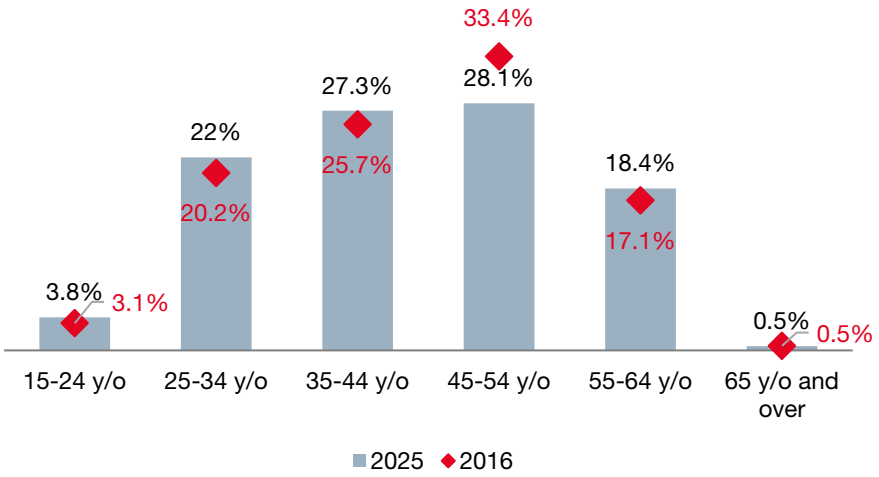

Figure 28. Age pyramid of the Civil service in 2016 and 2025

Sources: Human Resources and Training Department, Monaco Statistics

The age distribution of the civil servants has changed over the last ten years, although the average age has remained relatively stable at around 43.5 years over the period.

Figure 29. Breakdown of civil servants by age brackets in 2016 and 2025

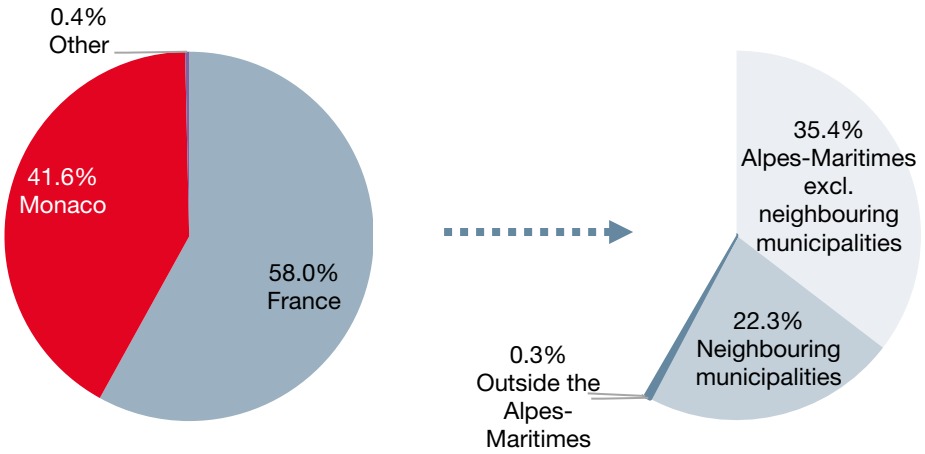

Sources: Human Resources and Training Department, Monaco Statistics

The 45-54 age group, which represented a third of the workforce in 2016, now accounts for 28.1% in 2025 (-5.3 percentage points). The gap has thus narrowed with regard to the population of staff aged 35 to 44, comprising 27.3% of the civil servants (vs 25.7% ten years ago). In parallel, the proportion of 25–34-year-olds also increased over the period (+1.8 points).

4.6. The number of commuters employed in the Civil service continues to grow

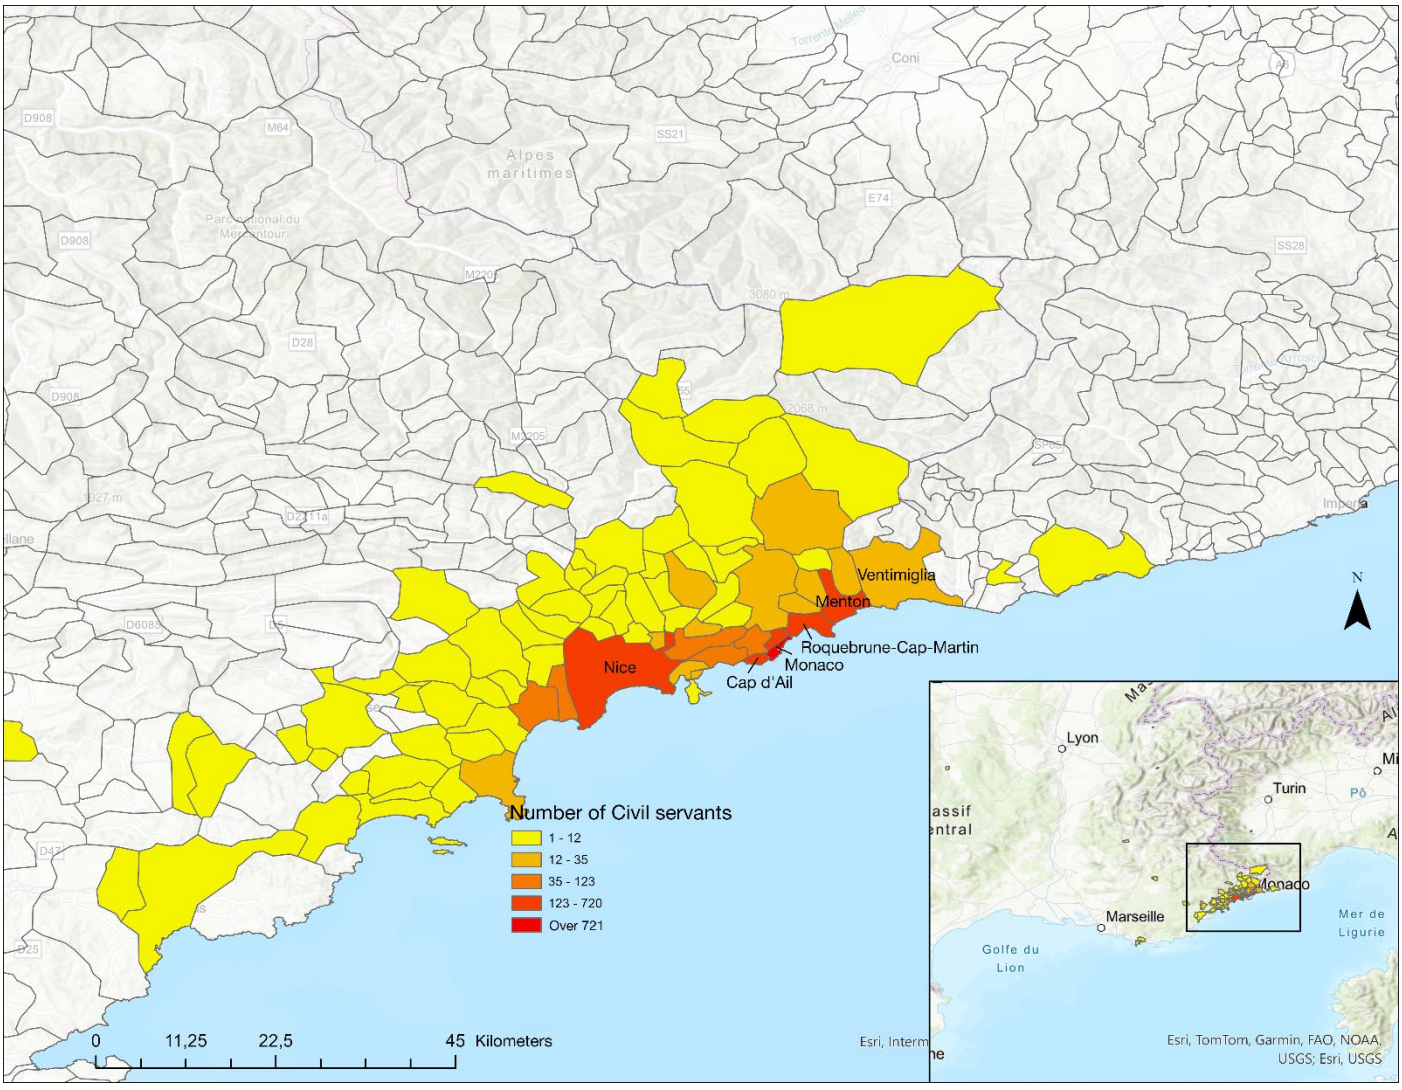

Figure 30. Breakdown of civil servants by area of residence in 2025

Sources: Human Resources and Training Department, Monaco Statistics

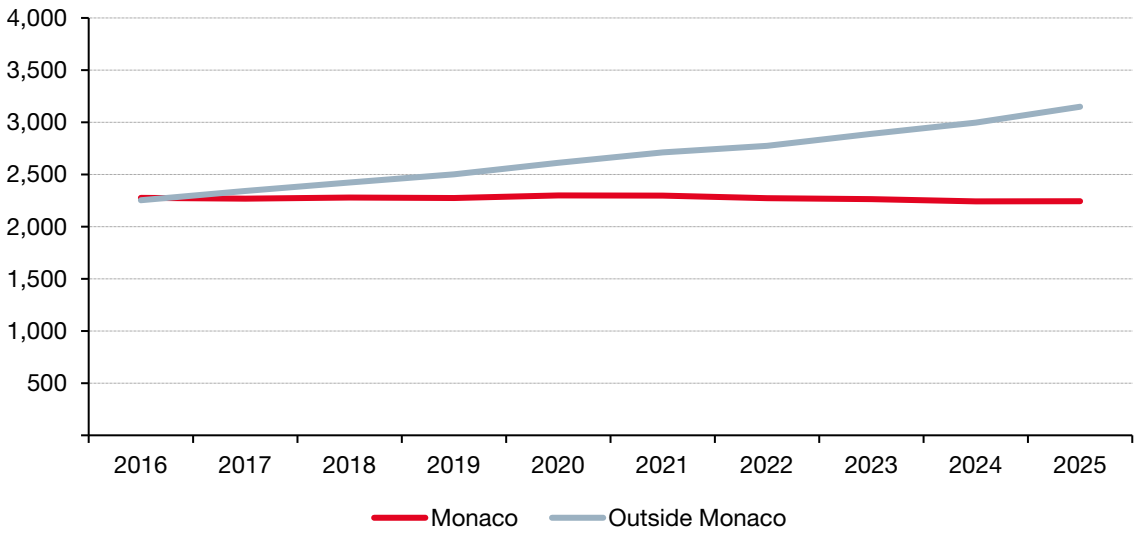

In 2025, almost six out of ten civil servants are commuters who live in France, mainly outside the neighbouring municipalities. However, Monaco remains the primary place of residence for public sector employees, accounting for 41.6% in 2025, i.e. 2,244 people. With 720 residents (13.4% of the workforce), Nice ranks second. Nearly 500 people commute from Menton (9.1%). They are followed by the neighbouring municipalities, which, taken together, account for 22.3% of the employees (or 1,204). Taken individually, they each account for between 300 and 400 civil servants, Roquebrune-Cap-Martin in the lead (387 people, or 7.2%).

Figure 31. Number of civil servants by municipality of residence in 2025

Sources: Human Resources and Training Department, Monaco Statistics

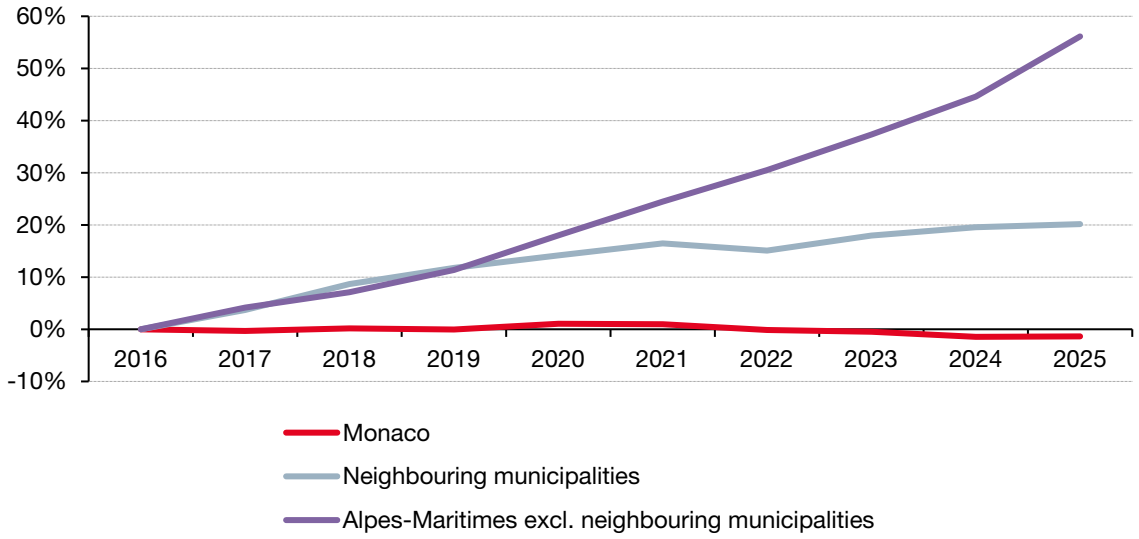

Figure 32. Ten-year change in the Civil service workforce by place of residence

Sources: Human Resources and Training Department, Monaco Statistics

In 2016, the proportion of civil servants living in Monaco was similar to that of commuters. Over the past ten years, whilst the number of residents of the Principality has remained relatively stable during this period, the number of civil servants living outside Monaco increased sharply (+896 people, i.e. +39.8% over the decade). This population exceeds 3,000 people in 2025, thereby reducing the proportion of Monaco's residents to less than 42%.

Figure 33. Change in the Civil service workforce by place of residence

Sources: Human Resources and Training Department, Monaco Statistics

The increase in workers living out of Monaco was mainly driven by employees residing in the Alpes-Maritimes, excluding neighbouring municipalities. Indeed, this group rose by 56.1% between 2016 and 2025, which corresponds to 686 additional people over the period (whom 259 were in Nice alone). At the same time, the number of civil servants living in a bordering municipality has also risen, albeit to a lesser extent: it has increased by 20.2%, more than 200 people more than ten years ago. With +116 employees (or +42.8%), the city of Roquebrune-Cap-Martin appears to be the most dynamic of these neighbouring municipalities over the decade.

5. Self-employed workers

5.1. Over 6,500 self-employed activities by the end of 2025

In 2025, the number of self-employed workers and their activities is rising at a similar rate.

Table 15. Number of self-employed workers and activities in 2025

	Number	Variation 2024/25
Self-employed workers	6,273	3.0%
Activities	6,588	2.6%
Ratio activities/self-employed workers	**1.05**	

Sources: Caisses sociales de Monaco, Monaco Statistics

As at 31 December 2025, Monaco records 6,273 active self-employed workers, spread across 6,588 distinct activities. These results correspond to increases of 3.0% and 2.6%, respectively, compared to the end of 2024. On average, each self-employed worker engages in 1.05 activities (same as last year). This ratio was 1.08 ten years ago.

Table 16. Breakdown of self-employed activities by type and sector in 2025

	Number	Share

Note: New MESs since the entry into force of the NAF 2025 on 1 January 2026
Sources: Caisses sociales de Monaco, Monaco Statistics

Nearly 2,000 self-employed activities – i.e. around three out of ten – are Professional, scientific and technical activities in 2025. Wholesale trade ranks second, comprising more than 900 activities (14.3% of the total). Medical activities help to place Human health, education and administration just off the podium (582 activities, or 8.8%). At the other end of the spectrum, Industrial, productive and craft activities represent the sector with the fewest activities in 2025.

5.2. A steadily growing number of self-employed activities

Over the past ten years, the number of self-employed workers and their activities has increased steadily.

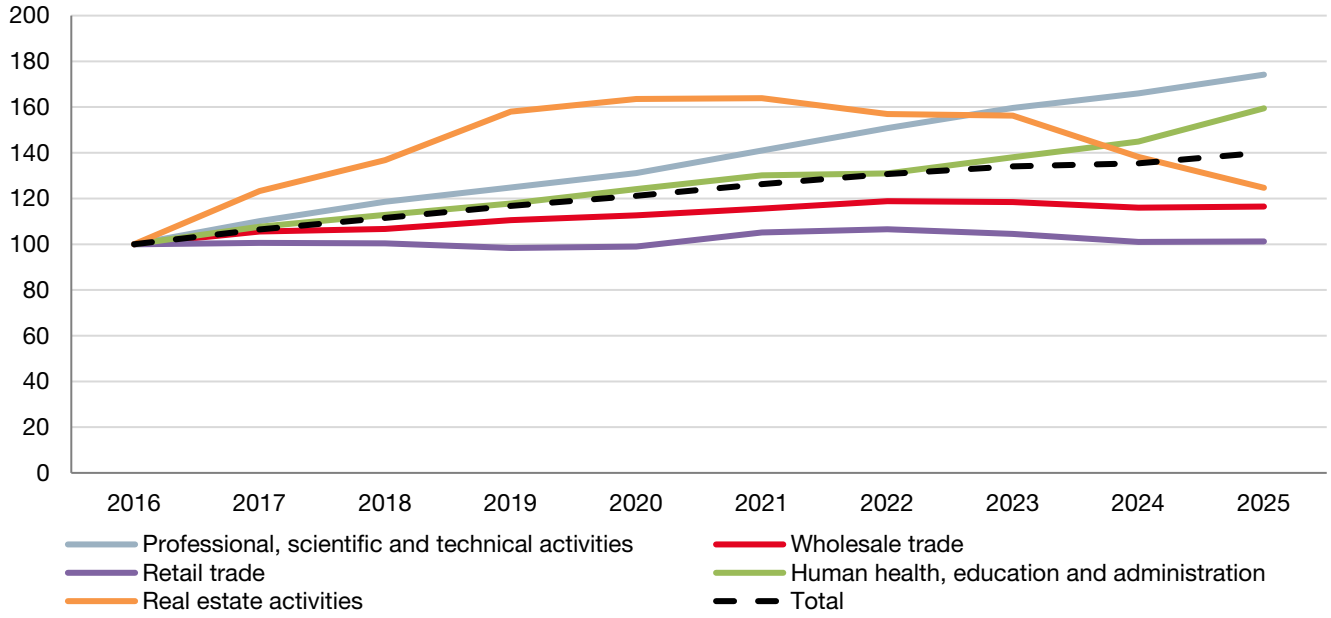

Figure 34. Ten-year change in the number of self-employed workers and their activities

Sources: Caisses sociales de Monaco, Monaco Statistics

In 2025, there are 1,883 more activities and 1,927 more self-employed workers compared to 2016.

Figure 35. Change in the top five activities among self-employed workers

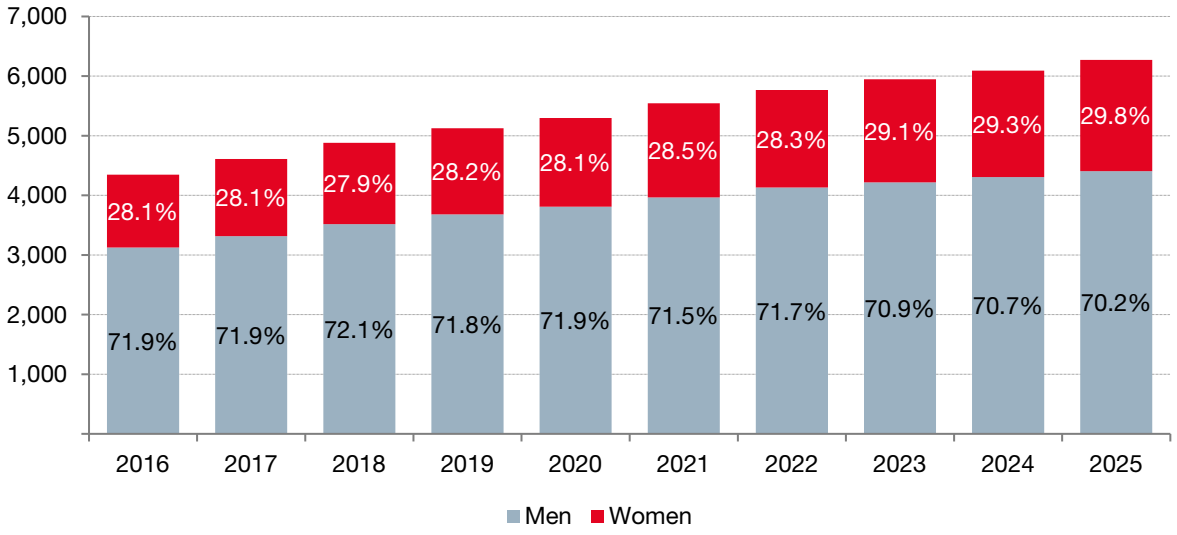

Reading: The number of Professional, scientific and technical activities has increased by 74.2% between 2016 and 2025 (index 174.2 in 2025). Over the same period, the number of self-employed activities in the Principality overall has increased by 40.1% (index 140.1 in 2025).
Sources: Caisses sociales de Monaco, Monaco Statistics

The total number of activities carried out by self-employed workers increased by 40.1% between 2016 and 2025. Over this period, the five most common types of activity have experienced various changes. Professional, scientific and technical activities grew by 74.2%, i.e. +830, whereas the Human health, education and administration sector records the second highest increase in value, with 217 additional self-employed activities. Meanwhile, Real estate activities, Wholesale trade and Retail trade grew at a slower rate than the overall self-employed activities. However, their respective levels in 2025 remain higher than those observed in 2016.

5.3. A majority of self-employed workers are male and in their fifties

By the end of 2025, the population of self-employed workers comprises 4,406 men and 1,867 women, a male population of 70.2% (around 9 percentage points higher than among private-sector employees).

Figure 36. Ten-year change in the number of self-employed workers and gender breakdown

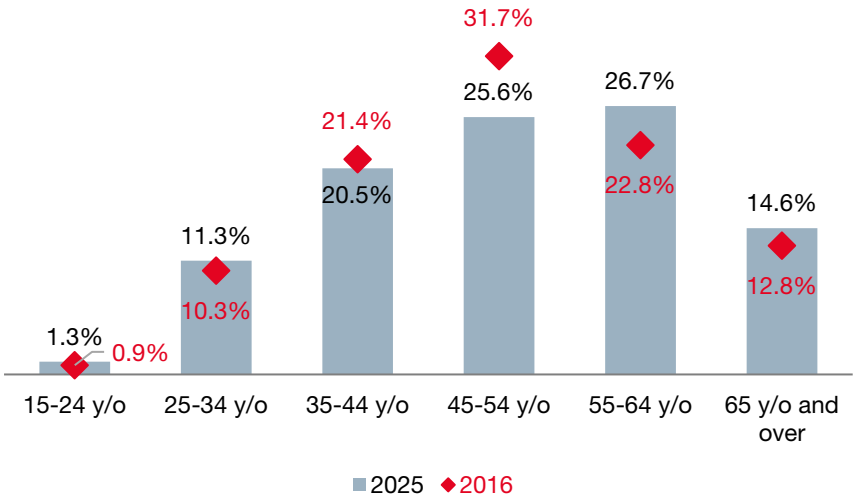

Sources: Caisses sociales de Monaco, Monaco Statistics

Although women are in the minority among self-employed, their representation has risen steadily over the last decade. Between 2016 and 2025, their proportion grew by 1.7 percentage points.

With 58.5% of women in 2025, the Other service activities appear to be the only MES in which men are in the minority, mainly due to activities in the hairdressing and beauty care sectors, which are predominantly female.

Figure 37. Change in the age distribution of the self-employed workers

Sources: Caisses sociales de Monaco, Monaco Statistics

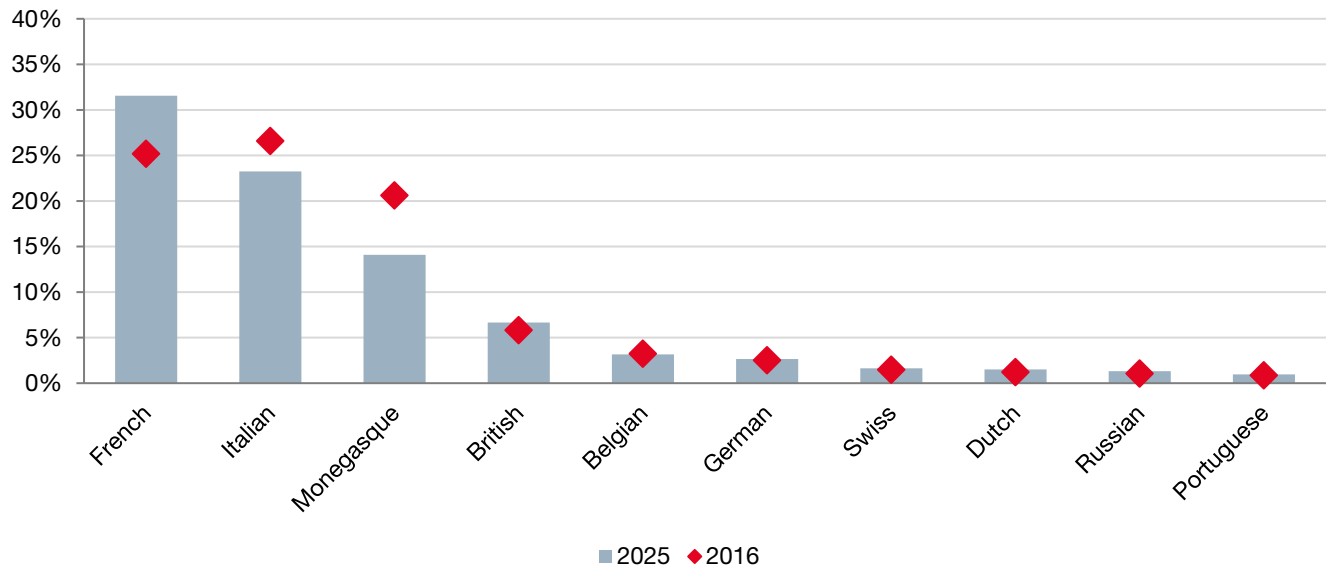

In 2025, self-employed workers are 50.8 years old on average, compared with 50.2 years in 2016. While women's average age is similar to that observed ten years ago (around 48.5 years), men's is one year higher (51.8 years vs 50.8 years in 2016).

The 55–64 age group is now the largest, accounting for 26.7% of the self-employed, ahead of the 45-54 age group with 25.6%. The self-employed population, along with the salaried population, is ageing.

5.4. Almost 900 Monegasque self-employed workers in 2025

In 2025, the French make up the largest group among self-employed workers, followed by the Italians and by the Monegasques.

Figure 38. Distribution of the most represented nationalities among self-employed workers in 2016 and 2025

Sources: Caisses sociales de Monaco, Monaco Statistics

With 1,980 people at the end of 2025, the French account for 31.6% of the self-employed population. The Italians come in second place, with 1,458 people – or 23.3% of the total. The Monegasques number 884 and account for 14.1%. This top three has remained unchanged over the last ten years, but their relative positions have shifted: in 2016, the Italian nationality was the most common among self-employed workers (up to 26.6% of the population), ahead of the French and the Monegasques.

1,220 self-employed activities are carried out by Monegasque nationals in 2025, resulting in an average ratio of 1.38 activities per national worker, higher than the overall average of 1.05.

Professional, scientific and technical activities comprise a quarter of the 1,220 independent Monegasque activities. They are followed by Retail trade (10.5%), Human health, education and administration (9.9%) and Real estate activities (9.1%).

Methodological guidelines

Sources

All statistics presented in this Observatory are derived from administrative sources made available to Monaco Statistics.

Information on employment comes mainly from two different sources: the Human Resources and Training Department (DRHFFP) for the public sector and the Caisses Sociales de Monaco (CSM) for the private sector.

The DRHFFP manages the recruitment, training, monitoring and career development of the Monegasque Civil service (civil servants and non-tenured State employees).

As the CSMs are responsible for managing the compulsory social security schemes for employees and self-employed persons in the Principality, they are the preferred source of all data relating to employees and employers in the private sector, as well as those of self-employed workers.

The statistics from this Observatory cover a 10-year period, except for data on the place of residence of private-sector employees, which has only been available in consolidated form since 2017.

In 2022, the Caisses Sociales de Monaco data on private-sector salaried employment were revised. Thus, changes and results prior to 2022 may differ from those in previous Monaco Statistics publications. The same applies to 2024 data of the Civil service that has been enhanced in 2025.

Statistics on remote workers are provided by the Department of Employment, responsible for the development and application of labour legislation and regulations in Monaco.

Definitions

- **Salaried jobs in the private sector**: a job corresponds to the employee/employer pair. An active job is a job for which at least one hour of work or a non-zero wage has been declared during the period analysed.
- **Employees in the private sector:** an employee is represented as a weight corresponding to the proportion of hours worked with his or her various employers.
- **Civil service employees:** only active personnel is taken into account, that is, employees in “active” position (the “detached service” and “availability or unpaid leave” positions are excluded). Substitutes replacing an employee on sick or maternity leave are not considered, as opposed to substitutes filling in for open positions or unpaid leave.
- **Self-employed workers:** all individuals authorised to exercise a professional activity in Monaco on a self-employed basis (this activity may be of a craft-based, industrial or commercial nature, or it may be a liberal profession) are considered as self-employed workers, with the exception of non-employee directors of Sociétés Anonymes Monégasques (± Monegasque joint-stock companies). A self-employed worker may operate several businesses. Similarly, a business may be run by several self-employed workers.

Additional notes

- The number of workers in the Principality is nearly twice that of the residents, so some traditional labour market indicators cannot be directly calculated within the Principality. This is particularly the case for the employment rate, which measures the proportion of people of working age (typically between 15 and 64 years old) who are employed, and the unemployment rate, which represents the proportion of active individuals (of working age and actively seeking employment) who are unemployed.
- The new classification of economic activities "NAF 2025" has been applied in the Principality since 1 January 2026. In this context, the groupings and labels of the major economic sectors (MESs) have been redefined. There are now fourteen Monegasque MESs out of the new NAF (up from twelve previously). Consequently, the sectoral results have been recalculated and are not comparable with those in previous publications.
