City Trend viewer

Dashboard | Published 01 Jul 2026 | Modified 29 Jun 2026

Share

The viewer displays the evolution and long-term trends of $PM_{2.5}$, NO_2, and ozone concentrations from 2013 to 2024, using the latest validated air quality data reported to the EEA. For $PM_{2.5}$ and NO_2, the indicator shown is the annual mean concentration. For ozone, the indicator is the annual highest six-monthly average of the daily maximum 8-hour mean concentration. For each city, the values displayed represent the arithmetic mean of the concentrations measured at all sampling points located within the city's administrative boundaries.
